

The CDS Information System

Overview & stats 2023

CDS Council – November 2023

Pierre Fernique
on behalf of all the CDS staff

Global usage 2023

- **3.0 million requests per day**
- **>390K unique IPs per month**

CDS main metrics (Oct 2022 - Sep 2023)
 compared to Oct 2021 - Sep 2022

Main services	Simbad <i>Astro. object DB</i>	Vizier <i>Catalog service</i>	Aladin <i>Image service</i>	Total
users/month	190.3K +23% Adv.users: 1088	61.1K +35%	390.2K +8%	> 390.2K
queries/day	448.9K +30%	727.1K +100%	1.8M +5%	3.0M
load/day	6.1GB -13%	no data	263.3GB +62%	> 269.4GB
data volume	44.2GB +28%	77.0TB -3%	713.1TB +39%	790.1TB
data content	16.9M obj +17%	24.3K cats +6%	1203 HIPS +16%	
reliability	99.82% +0.08%	97.94% -1.2%	99.84% -0.09%	> 97.94%

(Bots have been removed of these stats)

users/month Based on unique IP (Adv.Users = only based on "advanced scientific queries") on the main site

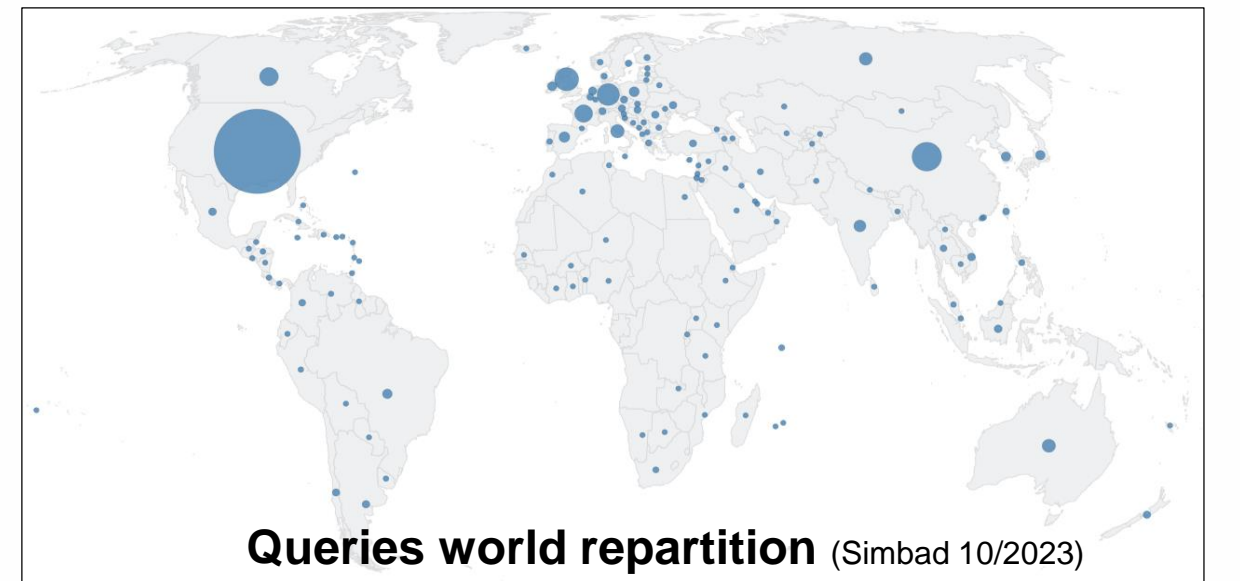

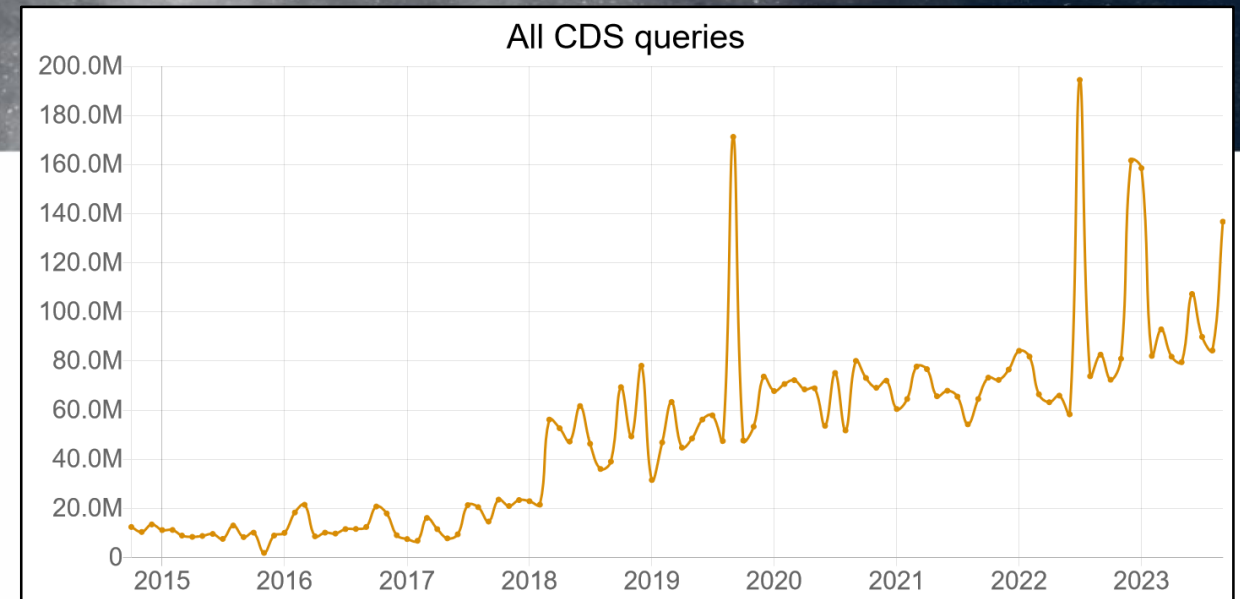

queries/day Based on effective DB queries (object queries, catalog queries, HIPS tile queries...)

load/day Downloaded from CDS servers

data volume Volume of service (data + index)

data content Number of service "items"

reliability Percentage of service availability (mirrors included)

□ Constraints and consequences

- **Our goal** : **permanent availability** 24 hours a day, 7 days a week, in a classic academic context (technical staff without on-call duty)
- **Our architecture**: **total duplication** : **services + data**, on several distinct geographical sites (still in progress)
- **It guarantees**:
 - the **performance** and **continuity** of services
 - the assurance of a **rapid resumption** of service in the event of a major accident at one of the sites (PRA)

□ CDS S.I. reliability

Time percentage of reliability for main CDS services^(*)

□ CDS service architecture

- 2 **geographically distinct local machine rooms**
- **External mirror sites** (in France and in other countries)
- Server **virtualisation**, via a cluster of VMWare hypervisors, and Docker encapsulations
- Data storage equipment: **2 RAID6 bays synchronised on the 2 local sites** ("CDS Allsky data system")
- Archive storage equipment : **800To cheap disks**

- **2 local computer rooms**
=> Unistra DC
=> Replicated elements in IPHC DC
- **7 external sites** (6 VizieR + 1 Simbad mirrors)
- **20 partner HiPS sites** (Aladin tiles)

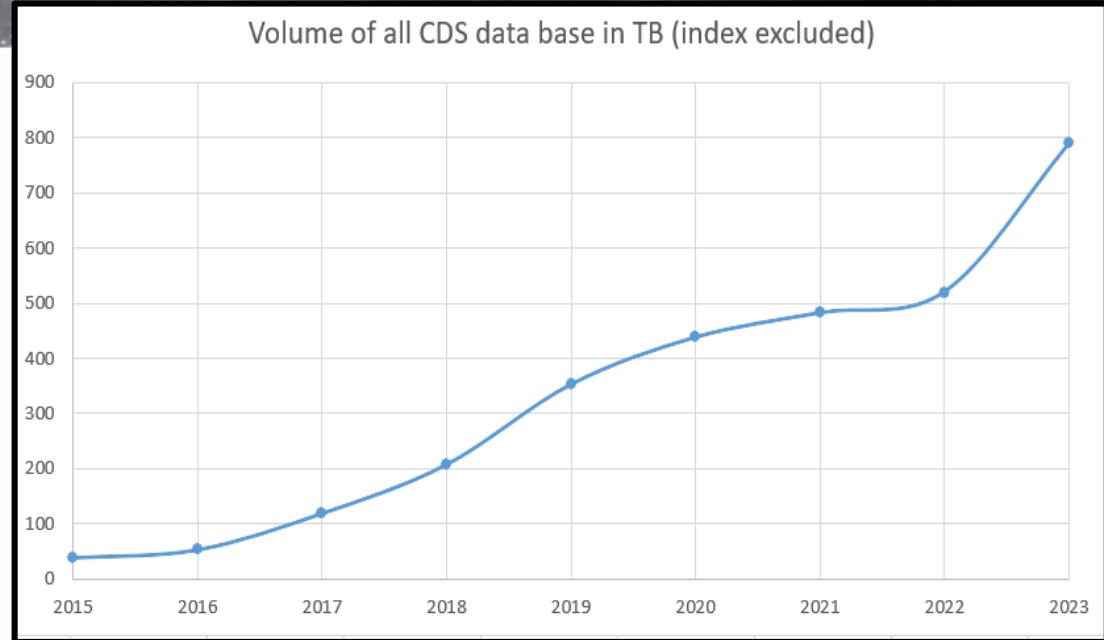

□ Local machine rooms evolution

- **Retirement** of CDS installations in the **local server room on the ObAS** site
 - Strong encouragement from the University to close this ROOM (corresponding to University and national level policies of rationalization/reduction of small server rooms)
 - Technical limitations of the server room
- **Our solution: Partnership with the IPHC** (UMR7178) on the CNRS Cronenbourg campus.
=> Technical and functional conditions well adapted
- **University Data Centre will become the main local site** for our installations.

Relocation achieved during 2023 spring

Operational storage

- Sept 2023: **790 TB** : 90% for Aladin, 9% VizieR
- Evolution relies to the volume of astronomical data published (bibliographic data, tables, catalogues and image surveys)
- Redundancy/wasteSpace factor : x5 (RAID6, mirror, snapshots, preparation, backup...)
- *Disk storage provisional plan : ~5 PB in 2025, ~9 PB in 2029 (including redundancy)*

☐ Servers

- **CDS services** require **low CPU power** (except Xmatch service)
But **a mistake to undersize the servers** because the availability constraint implies the capacity to absorb "peaks"
=> The technical solution: **virtualise the servers** as far as possible on VMWARE hypervisors (presently 5)
- **Computing machines** for data preparation
=> **3 big machines** are sufficient for the task (Aladin HiPS, VizieR big catalogs)

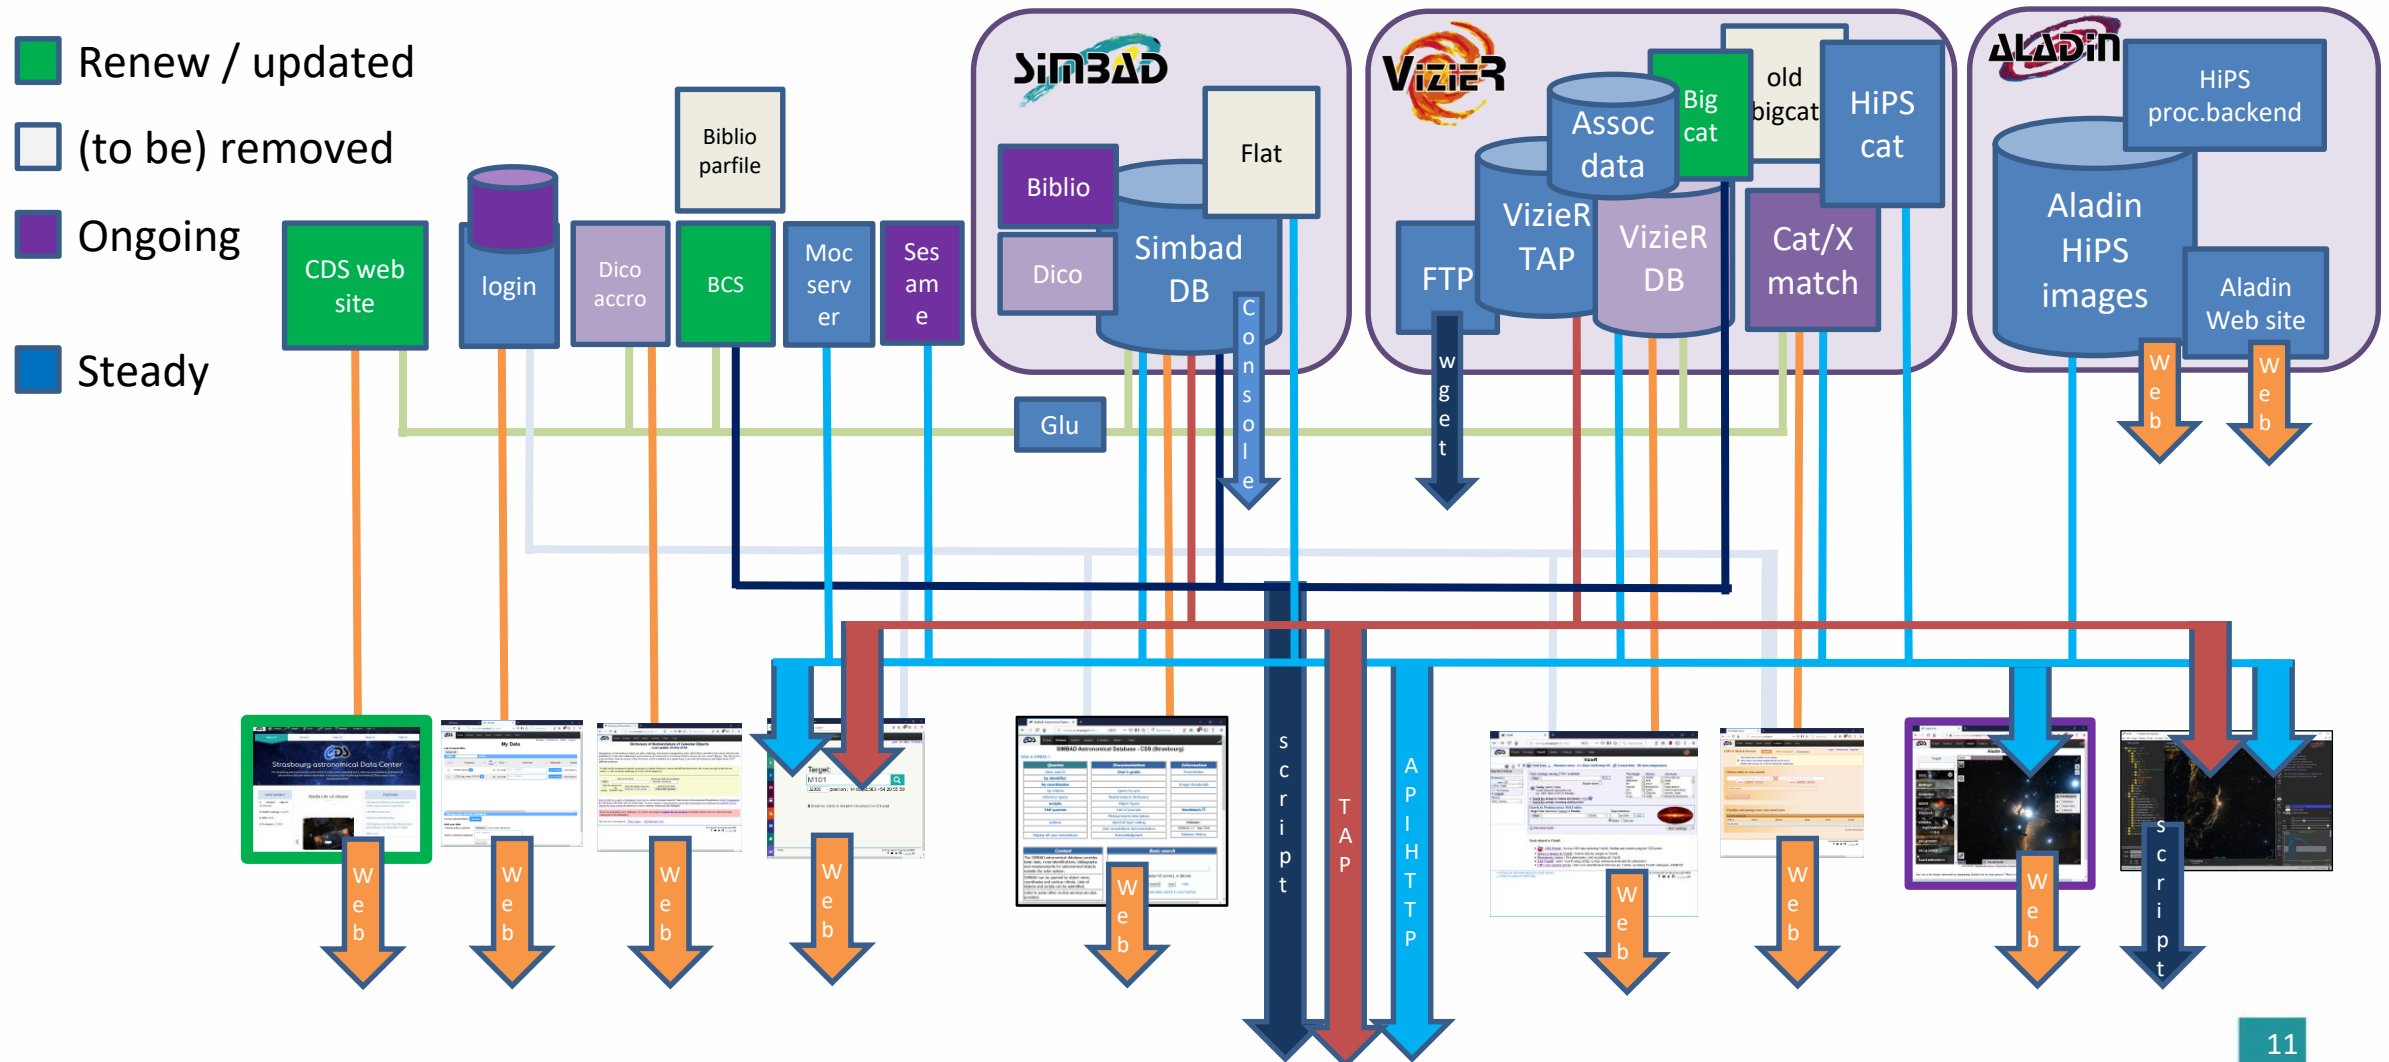

□ Software development strategy

- **Open source software** supported by a dynamic community (e.g. Postgres, astropy, etc.)
- **"In-house" developments** for libraries and tools particularly specific to our activity (e.g. management of spatial indexes, astronomical libraries, bibliography processing, etc.)
=> Under Open licence (French minister recommendation)
- Use of paid software remains exceptional, justified by the absence of an equivalent free solution (e.g. VMWare). These paying solutions are considered as transitory
- At least **two developers per service**.
=> By the end of 2022, this strategy is assured partially with contractors

□ Information system

- Nov 2023: **CDS Information service** is based on **24 components**
- The permanent **evolution** of these components **is essential** to map:
 - The current needs (astronomy and data evolution)
 - The CDS human resources
- For each component, we evaluate its sustainability and we plan its renewal, evolution or withdrawal

Evolution detail of IS components

□ Recent developments in the IS

- **BCS** - the deployment of the **new journal article management system**:
=> The "BCS" is replacing the old system (parfile based)
- **MOCset** - the evolution of the **global positional index of VizieR** for a MOC compatible solution (replacing Qbox).
- **QATSS** – new tool/lib for big catalog manipulations
- **Web site** - full redesign of **the CDS website** (deployment phase).

□ Questions ?

The screenshot shows the homepage of the Strasbourg astronomical Data Center (CDS). At the top, there is a dark navigation bar with logos for various services: CDS, PORTAL, SIMBAD, VizieR, ALADIN, XMATCH, OTHERS, and HELP ?. Below this is a white navigation bar with a home icon, 'About', 'Services', 'Tools', 'News', and 'Help' menus, along with a search icon. The main content area features a large blue header with the CDS logo and the text 'Strasbourg astronomical Data Center'. Below the header, a paragraph describes the center's mission: 'The Strasbourg astronomical Data Center (CDS) is a data center dedicated to the collection and worldwide distribution of astronomical data and related information. It is located at the Strasbourg Astronomical Observatory, France.' A link to 'Read more about the CDS' is provided. At the bottom, there are three light blue buttons labeled 'Some numbers', 'Current Data Current CDS datasets', and 'Flash news'.
