

CDS Scientific Council Meeting: Nov 29-30, 2021

Hybrid - *in-person* + *virtual meeting*

Observatoire astronomique de Strasbourg - Amphitheatre

11 rue de l'Université, Strasbourg

14h Strasbourg, 13h London, 8h Wash. DC

Monday 29 November

14h - Welcome and introductions.

14h10 - CDS Activities 2020-2021. (*M. Allen*)

14h30 - CDS Information System. (*P. Fernique*)

14h45 - SIMBAD and Biblio. (*C. Loup, A. Oberto, S. Lesteven*)

15h00 - VizieR. (*P. Ocvirk, G. Landais*)

15h15 - Aladin. (*C. Bot, T. Boch*)

15h30 - Coffee Break

16h00 - X-Match. (*F-X. Pineau*)

16h15 - R&D. (*A. Schaaff*)

16h30 - CDS Science Team Work. (*B. Vollmer*)

16h50 - Demonstration. (*S. Derriere*)

17h - Discussion. (*All*)

17h30 - Close.

Tuesday 30 November

10h - 12h : Visits / demos for in-person participants

10h - Demonstration of the Coronelli Globe with data projection (*S. Derriere*)

- other informal demonstrations

12h - Lunch with all the CDS (University Restaurant 'Le 32')

14h - CDS strategy, plans and challenges. (*M. Allen*)

14h30 - **Closed session**

16h - Close

In-person + Remote Attendees:

(All CDS staff in the open sessions)

Stephen Serjeant [Chair] (Open University, UK) - *in-person*

Eric Peng (Peking University) - *videocon*

Guido De Marchi (ESA) - *in-person*

Michael Sterzik (ESO). - *videocon*

Valerie Connaughton (NASA) - *videocon*

Denis Veynante (CNRS, HPC and data) - *apologies*

Philippe Laudet (CNES) - *videocon*

Thierry Forveille (IPAG) - *in-person*

Franck Le Petit (Observatoire de Paris) - *in-person*

Chiara Ferrari (OCA) - *videocon*

Marian Douspis (IAS) - *videocon*

Bruno Bezard (INSU representative delegated by G. Perrin) - *in-person*

Pierre-Alain Duc (Dir. Obs. Strasbourg) - *in-person*

Representative of Université de Strasbourg - Julie Thompson

CDS Activity Report 2020-2021

November 29, 2021

Mark Allen - Director CDS

CDS mission

- **Collect useful data on objects in electronic form**
- **Improve them by critical evaluation and combination**
- **Distribute the results to the international community**
- **Conduct research using the data**

Science Driven:

- *Necessary evolutions to meet the scientific reference service needs of the astronomy community*
- *Innovations to meet challenges and ensure sustainability*
 - *Science is changing, technology is changing*

Contributing to the global astronomy data infrastructure

Ground and Space Observatories, Instruments and missions

Journals

+ ...

Astronomy Data Centres

Virtual Observatory

ASOV

H2020 projects:

Data e-Infrastructures

□ 2020-2021

- **A challenging year that required adaptations to the way of working** — *Re-grouping since September 2021*
- **Core work of building CDS content, and operating the services, was maintained at a very high level.**
- **Improvements to the Information System at various levels, and planning for the future.**
- **Developments to support internal CDS processes, & developments in response to new scientific needs - e.g. time domain!**

□ 2020-2021

Special things in this period:

- Working from home: 30 Oct. 2020 - 02 Sept. 2021.
(50% in-person in Summer 2021)
- Emphasis on operational stability and continuity.
- Continually adapting procedures to deal with the uncertainty.
- Communications - videocons, rocket-chat.
- Virtual meetings / conferences / training.

□ 2020-2021

- **CDS services continue to be heavily used**
 - **1.9 million queries/day** - *see next presentation*
- Contributions: IVOA, EOSC, RDA, IAU
- Projects — **ESCAPE, EuroPlanet, EOSC-Future, XMM2ATHENA**
- Many community interactions - **AAS, ADASS, EAS, LISA**, UNISTRA OAW, French, Chinese, German communities, Time Domain Community, Radio Ast. Community +...
- Engagements with large projects in various ways...
- CDS Science team progress - *see presentation*
- Involvement in networks at national level

□ Highlights

- **New CDS ‘publishing registry’** - makes CDS services accessible in many tools / services. *(June 2021)*
 - Complies with most recent IVOA registry recommendations
 - Vizier mirrors, MOC footprints, spectral bands, catalogue DOIs, keyword mapping to Unified Astronomy Thesaurus
- **SPECFIND V3.0 released** *(October 2021)*
 - Radio continuum source catalogue
 - 204 input tables from Vizier
 - Cross-identified 1.6 M radio sources
 - 340 000 radio spectra created
 - Stein et al. 2021 (A&A 655, A17)
 - ‘Emblematic CDS paper’ :
 - Astronomers, Documentalists, Engineers

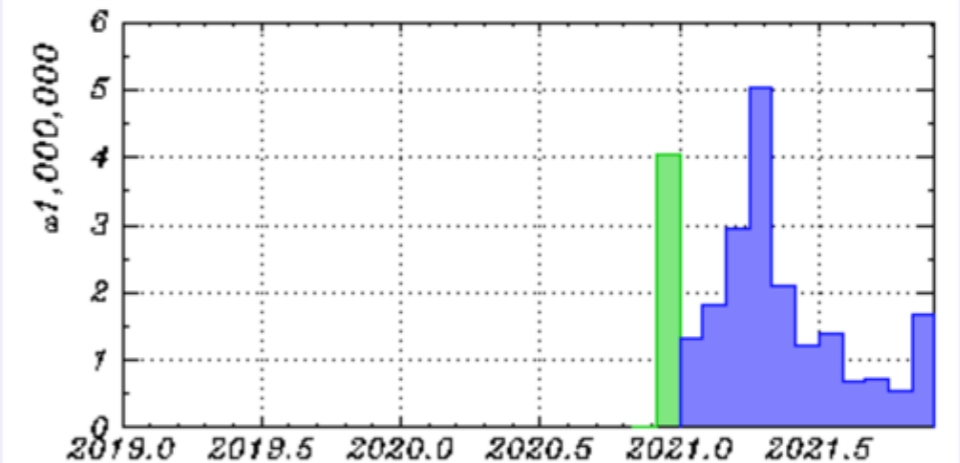

□ Highlights

- **Gaia Early Data Release 3**
- **3 December 2020**
- 1.8 billion records
- 1.5 billion stars:
 - parallaxes, proper motions, colours
- VizieR, X-Match, Aladin/Aladin Lite, +VO
- CDS generated all-sky flux map, + more
- 4 million queries in 1st month

[I/350](#) Gaia EDR3 (Gaia Collaboration, 2020)

[I/345](#) Gaia DR2 (Gaia Collaboration, 2018)

DR2 also continues to be heavily used

partnerships: ESA/DPAC, CNES

□ CDS in the community

Astronomical Data Analysis Software and Systems (ADASS) Conference, Virtual (Hosted by IAA-CSIC, Granada), 8-11 November 2020

Invited talk: *Data interoperability – The CDS experience. (Pierre Fernique and the CDS team)*
(see the CDS-ADASS document for all CDS contributions).

New Year Lectures 2021 organized by the NAOC (China National Astronomical Data Center), **18 January 2021.** *SIMBAD, VizieR and Aladin: The CDS Astronomical Suite - P. Fernique*

LINEA workshop On the Future of Data Centers and eScience Institutes, 13-15 April 2021

Invited talk: *CDS services for reference astronomy data - supporting Open Science*, M. Allen.

Library and Information Services in Astronomy (LISA IX) Conference, June 14-18, 2021

Contributed talk: *Impact of Astronomy Evolution on the Documentalists' Activities at CDS*
E. Son, S. Lesteven, F. Marquis, F. Genova, and M. Allen (video link), + posters

American Astronomical Society (AAS) summer meeting, Virtual, 7-9 June 2021

Special session — Astronomical Data Visualization in the Age of Science Platform

Invited talk: *Aladin Lite, ipyaladin and the HiPS ecosystem*, T. Boch and the Aladin team

European Astronomical Society annual meeting. 28 June 28 - 02 July 2, 2021

Virtual Exhibit - S. Derriere, M. Allen, S. Amodeo, M. Buga, E. Collas, H. Heintz

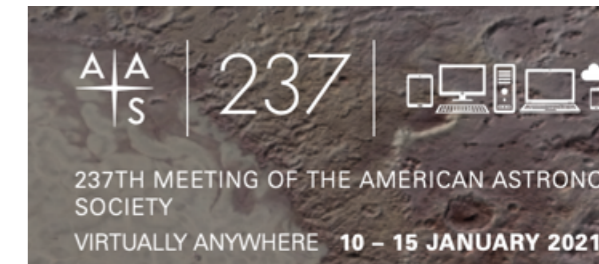

Special Session - Legacy and stewardship of astronomical archives towards multi-instrument, multi-wavelength and multi-messenger science.

Invited talk — *Spatio-temporal exploitation of astronomical archives*, S. Derriere.

□ CDS in the community

- **CDS virtual booth** at AAS 237
- ~142 booth visits
- Presentations in zoom
- Community feedback and questions
- Lessons learned
 - Register webinars for better visibility in the program

□ Communication themes:

Library and Information Services in Astronomy (LISA IX) Conference, June 14-18, 2021

Contributed talk: ***Impact of Astronomy Evolution on the Documentalists' Activities at CDS*** - E. Son, S. Lesteven, F. Marquis, F. Genova, and M. Allen

□ Space AND Time coverage !

SPACE COVERAGE

TEMPORAL COVERAGE

Impact of astronomy evolution on the documentalists' activities at CDS

SON Evelyne

MARQUIS Fabienne

LESTEVEN Soizick

GENOVA Françoise

ALLEN Mark

On behalf of the CDS Team

European Astronomical Society annual meeting. 28 June 28 - 02 July 2, 2021

Special Session - Legacy and stewardship of astronomical archives towards multi-instrument, multi-wavelength and multi-messenger science.

Invited talk — ***Spatio-temporal exploitation of astronomical archives***, S. Derriere.

□ Other communication topics...

- Video hosting solution at UNISTRA
 - Will enable embedding
- Aladin Manuals in English (v10, 11)

- Best Practices for Data Publication in the Astronomical Literature:
 - ApJS submitted paper
 - Led by NED with many CDS contributions + others

DRAFT VERSION JUNE 4, 2021
Typeset using L^AT_EX two-column style in AASTeX63

Software Development Interns

7 interns, short term contracts

□ Staff - recent changes

Permanent staff:

- CNRS competition for documentalist: **E. Collas** started November 2020
- Transition to Emeritus Status: **F. Genova** - December 2020
- Documentalist - **F. Marquis** - departed October 2021 (25 yrs @ CDS)
- Administrative assistant - **L. Arbousse** - departed April 2021 (17 yrs @ CDS)

Continuing UNISTRA contract: **G. Mantelet** CDI - started Jan 2021

Contract staff changes:

- ESCAPE engineer: **M. Baumann** - departed April 2021
- Postdoc **Y. Stein** - departed February 2021
- Postdoc **K. Lutz** - departed March 2021
- Postdoc ESCAPE science support - **S. Amodeo** - started March 2021
- Postdoc XMM2ATHENA - **J. Kuutilia** - started August 2021
- IT Support Engineer – **M. Misslin** - started September 2021
- CDS Administrative Project Manager - **C. Holtzinger** - started October 2021
- Seeking a contract engineer for VizieR – now re-advertised

□ Full Time Equivalent

$$17.6 + 8.8 + 5.9 = 32.3$$

□ National and European Landscape

Elements that define high level policies:

- **French National Roadmap for Research Infrastructures**
- MESRI National Plan for Open Science - 2nd plan released in 2021
- European Cloud Initiative & European Open Science Cloud (EOSC) **
- (ESFRI Roadmap)

Recent and current developments

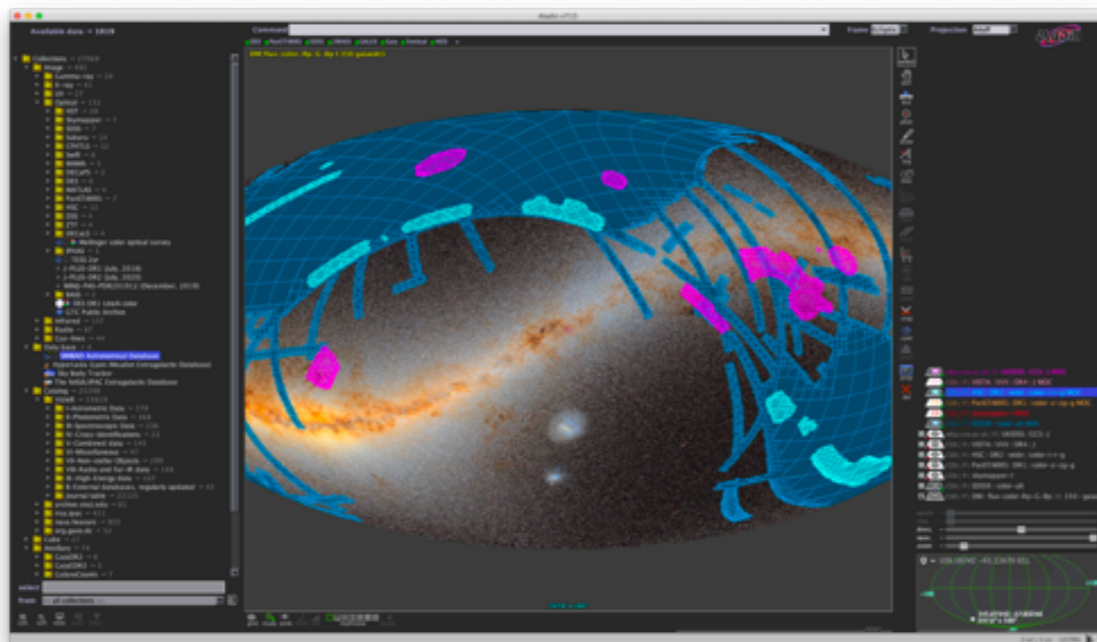

- CNRS-INSU Prospective
- INSU Astronomy & Astrophysics Prospective
- CNES - French Space Agency prospective
- US Decadal review — just released in November 2021
- ASTRONET Science Vision and Infrastructure Roadmap (in preparation now)

French national roadmap for Research Infrastructures

Successful application for inclusion

Criteria:

- European & International dimensions
- Scientific and Technological concept
- “Data” and “Data Management”
- Scientific production and service use
- Relationships to other infrastructures
- Industrial relations, innovation and societal impact

Previous version 2018

Application: Feb 2021, Result October 2021

Elements concerning scientific production and training

- Guidelines for users to cite the use of the services?
 - CDS service acknowledgements
- Number of publications from projects that have used the infrastructure (refereed)
 - 2017 : **947**
 - 2018 : **1107**
 - 2019 : **834**
 - 2020 : **1063**

(ADS full-text searches on SIMBAD, VizieR, Aladin and manual validation)

- Number of communications: **40-68** per year in 2017-20
- Events for training/dissemination: **13-32** days per year in 2017-20
- Trainees at CDS: **465-710** person-days per year in 2017-20
- Descriptive text explanations: CDS processes **~12000** articles per year, and ingests from **1200-1500** catalogues per year

Elements about usage and users, requests for *'Estimates'*

- Number of external academic users: national and international
 - **2464, 32700*** (2020)
- Number of unique visitors of web interfaces: **44000** (2020)
- Number of accesses via APIs: **660 000 000** (2020)
- Service availability: **> 99%**
- * Complementary remarks: *Uncertainties explained*

Relations to industry, innovation and socio-economic impact

- Contracts that *'valorize'* the CDS - to enable/support community use of the CDS services (including observatories and space agencies).
- Contracts for publication of data and provision of information.
- Growing use of CDS services by planetaria, and developers of planetarium software (*e.g. Digistar*).
- Training of interns - excellent preparation for engineering students.

□ Large project engagements

Euclid mission

- Presentation made to Euclid Consortium Board
- CDS individuals applying for EC membership
- MOU to be explored for CDS-EC-ESA

LSST Brokers

- CDS X-Match is part of the proposed FINK brokers
- Collaborative discussions ongoing with FINK and other brokers about thier use of CDS services as part of their operations

ESO and Hawaii observatoires

- Responding to requests for VizieR implementations as part of their operations

ESCAPE connections to ESFRI and other RIs

Telescope/instrument	Number of records	ETA	manageable at CDS? (tech-wise)	Band/depth
Gaia all epochs	$10^9 \times 100 \text{ epochs} \sim 1e11$	2022-2024	no	optical wide
Gaia flat	1.7×10^9	available in Vizier	yes	optical wide
Pan-STARRS DR1-2 all epochs	$2.1 \times 10^9 \times 10 \text{ epochs} \sim 2^{10}$	done	~yes?	optical wide
Pan-STARRS DR1-2 flat	2.1×10^9	DR1 in Vizier	yes	optical wide
ESO Phase III cats	$1-2 \times 10^9$	ongoing	yes	optical/NIR wide
LSST/Rubin all epochs	$4^{10} \times (\sim 250 \text{ epochs}) = 10^{13}$	2025-2030	no	optical wide
LSST flat	40×10^9	2025-2030	yes	optical wide
EUCLID	$\sim 10^{10}$ galaxies	2028 and beyond	yes	optical/NIR wide
JWST	deep extragal surveys, narrow FoV, high res	2022 and beyond	yes	NIR deep
Nancy Grace RST	a few 10^9 stars, 4×10^8 galaxies	launch 2027	yes	orange / NIR deep/medium wide
ELT	~narrow FoV, very high res (0.005")	2027	yes	optical/NIR deep
Giant Magellan Telescope	deep extragal surveys, narrow FoV, very high res (0.01")	2029	yes	optical/NIR deep
TMT	deep extragal surveys, narrow FoV, very high res (0.015")	2027	yes	NUV/optical/mid-IR
21cm / SKA	up to 10^9 gals	2030-ish?	yes	radio wide deep
GW: LIGO/PTA/LISA	?	operating and upcoming	yes	grav. wave
CTAO	?	2024	yes	gamma
KM3NET	?		yes	neutrino
ATHENA	several $10^5 - 10^6$		yes	X-ray
SVOM	?		yes	gamma

**Future-watch
- missions/surveys**

□ Virtual Observatory and Projects

- **CDS participation in Virtual Observatory activities at National, European and International levels**
 - OV-France (&ASOV), Euro-VO
- **CDS continues leading role in IVOA**
 - Executive board, WG/IG roles
 - Recent changes:
 - **A. Nebot**: Chair of Committee for Science Priorities (CSP)
 - **G. Mantelet**: V. Chair Data Access Layer WG
 - **H. Heintz**: Chair Education IG
- **Important progress for the interoperability of astronomy data and services**
 - e.g. fundamental underlying indexing of space-time coverage of data and HiPS system for hierarchical approach to big data. CDS MOCServer 2
 - Leadership for integration of Radio Astronomy (+others) into VO framework
 - CDS Publishing registry and many more...

□ Projects

- **ESCAPE** - big project in progress... see next slides...
- **Europlanet 2024** Research Infrastructure (EPN-2024-RI)
 - Small but important CDS participation (~20PM)
- **XMM2ATHENA** (*started 2021*)
 - A. Nebot is the ObAS coordinator. Postdoc — J. Kuuttila
 - ~5PM participation of CDS related to X-Matching
- **EOSC Future** - large (~40 M€) project of science and e-Infrastructures
 - Started April 2021
 - CDS is small part (20 PM) for Test Science Cases and training activities

□ ESCAPE Project

EUROVO

ESCAPE
European Science Cluster of Astronomy &
Particle physics ESFRI research Infrastructures

- **E**uropean **S**cience **C**luster of **A**stronomy and **P**article physics **E**SFRI infrastructures. (H2020 project, ~16 M€, 31 partners)
- Addressing the Open Science challenges of large astronomy infrastructures - in the context of EOSC
- CDS leads the CEVO Work Package (WP4)
 - **C**onnecting **E**SFRI to EOSC using **V**irtual **O**bservatory
 - Coordination of 16 partners (~348 PM, ~68 PM at CDS)
- Project extended to 48 months - ending Jan 2023
- Deliverables, milestones public on ESCAPE pages
- CEVO details on wiki pages
- Progress meeting/GA held Sept 28-29, 2021
- New project officer insists on more reviews - Next one 02 March 2022

Work Program

Data Lake:

Build a scalable, federated, data infrastructure as the basis of open science for the ESFRI projects within ESCAPE.

Science Platforms:

Flexible science platforms to enable the open data analysis tailored by and for each facility as well as a global one for transversal workflows.

Citizen Science:

Open gateway for citizen science of ESCAPE data archives and ESFRI community

Software Repository:

Repository of "scientific software" as a major component of the "data" to be curated in EOSC.

Virtual Observatory:

Extend the VO FAIR standards, methods and to a broader scientific context; prepare the VO to interface the large data volumes of next facilities.

Interoperability Standards
Metadata / Protocols
International context -

- **Virtual School Feb 2021**
 - Focus on students & postdocs
 - CDS tutorials, + others
 - Support of science cases
- **Technology Forum April 2021**
 - **Sharing practical expertise**
 - **'Hack-a-thon' mode**

ESCAPE **CENTRO DE ASTROBIOLOGÍA-CAB** **CSIC** **SVO**

The Euro-VO Schools

Virtual School in 2021

- Due to COVID-19 pandemic
- Online platforms:
 - Zoom: Live-on guiding of the hand-on session
 - Slack: Off-line forum for questions and discussions
- No negative impact on the learning
- Very positive evaluation by all

Funded by the European Union's Horizon 2020 - Grant N° 834064

- **Many project meetings... cross-WP activities, EOSC events...**
- **Some of the CDS benefits include:**
 - Aladin Lite v3, mocpy, MOC 2.0 reference implementations, +...
 - Support of training events - scientific and technical
 - Postdocs & engineers
 - High visibility in Open Science communities, and for European projects

WP4 Next Steps ... cont.

- * **2nd School** – Planned for Strasbourg, February 2022. (D4.6)
 - * In-person if possible, otherwise virtual again
 - * **Idea** – link the school with TSPs so that VO capabilities are well understood by TSP teams, plus precious feedback on the developments / tools / services
- * **Final Deliverable Reports to be developed in 2022**
 - * D4.7 Final analysis report on integration of VO data and services into EOSC
 - * D4.8 Final analysis report on IVOA standards and stewardship best practices
- * **Oct 2021 – June 2022** – analysis of the progress and results and prepare reports and publications, make visible in Astronomy and EOSC communities

□ Supporting Open Science infrastructure and organisation in astronomy (and more...)

International Astronomical Union (IAU)

- **C. Loup** elected to Organising Committee of Commission B2 “*Data and Documentation*”
- CDS operates the IAU Dictionary of Nomenclature

International Science Council ([ISC](#)).

- Committee on Data ([CODATA](#))
 - Task Group on Digital Representation of Units of Measure ([DRUM](#)) - input from **S. Derriere** bringing in experience of IVOA VOUnits standard

Research Data Alliance (RDA, RDA-France)

EOSC

- CNRS and UNISTRA are members of the newly created EOSC Association.
- **M. Allen** a coordinator of the Task Force for *Researcher Engagement and Adoption*.

□ Summary

- A challenging year for CDS
- Operational stability and high level production
- Important progress on core work of operating, maintaining and developing CDS reference services
- Adaptation of the ways of working
- Strong interactions and visibility in the community
- Progress on projects and new projects proposed
- Getting ready for a new era of Open Science
- Getting ready for the 50th anniversary of CDS 1972-2022

The CDS Information System

Overview & stats 2021

CDS Council – 29 & 30 November 2021

Pierre Fernique
on behalf of all the CDS staff

□ Information System update principles

The effort to **update the CDS's information system** continued in the direction initiated three years ago:

1. **Rationalisation** of the system's components
2. **Removal** or **evolution** of obsolete components
3. **Full redundancy** in distinct geographical locations (as far as possible)

This action must be driven by a precise knowledge of the functioning of the IS based on:

1. Operational **supervision**
2. **Monitoring** of use and content

□ CDS I.S. = 3 main services

Objects
from literature

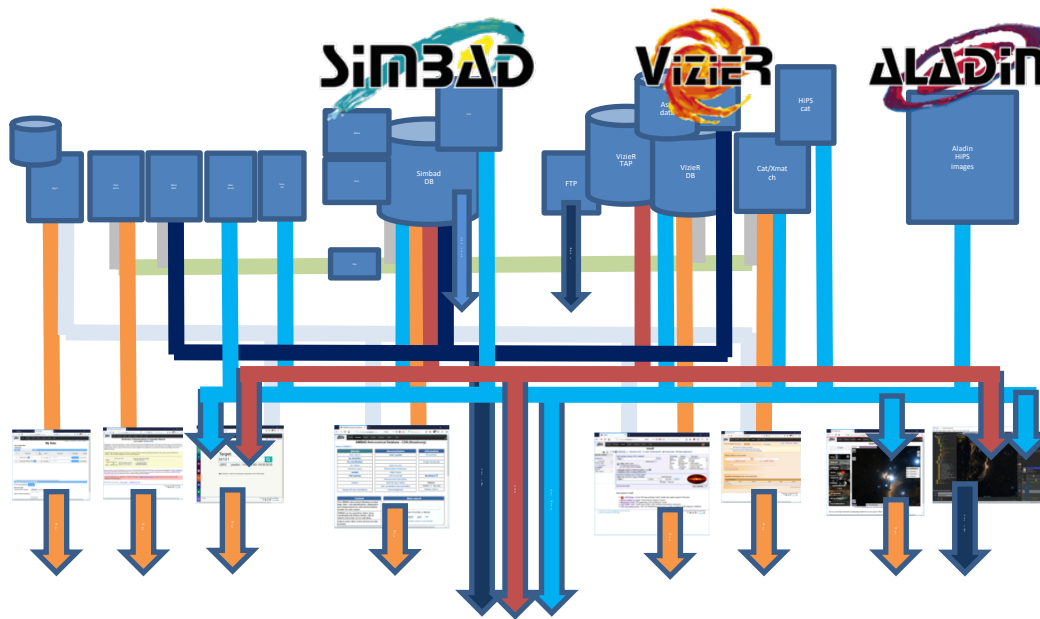

Catalogues
from literature & surveys

Images
from surveys

□ CDS infrastructure system 2021

- **19 components** (DB, servers...)
- For various Web clients, APIs & clients

- **12 local machines** (real or virtual) for implementing the 19 sub-components
- CDS **allsky storage system**
=> 1.6PB replicated
- **2 computer rooms**
=> One at the Observatory
=> Replicated elements in Unistra Data Center
 - Partially done in 2021

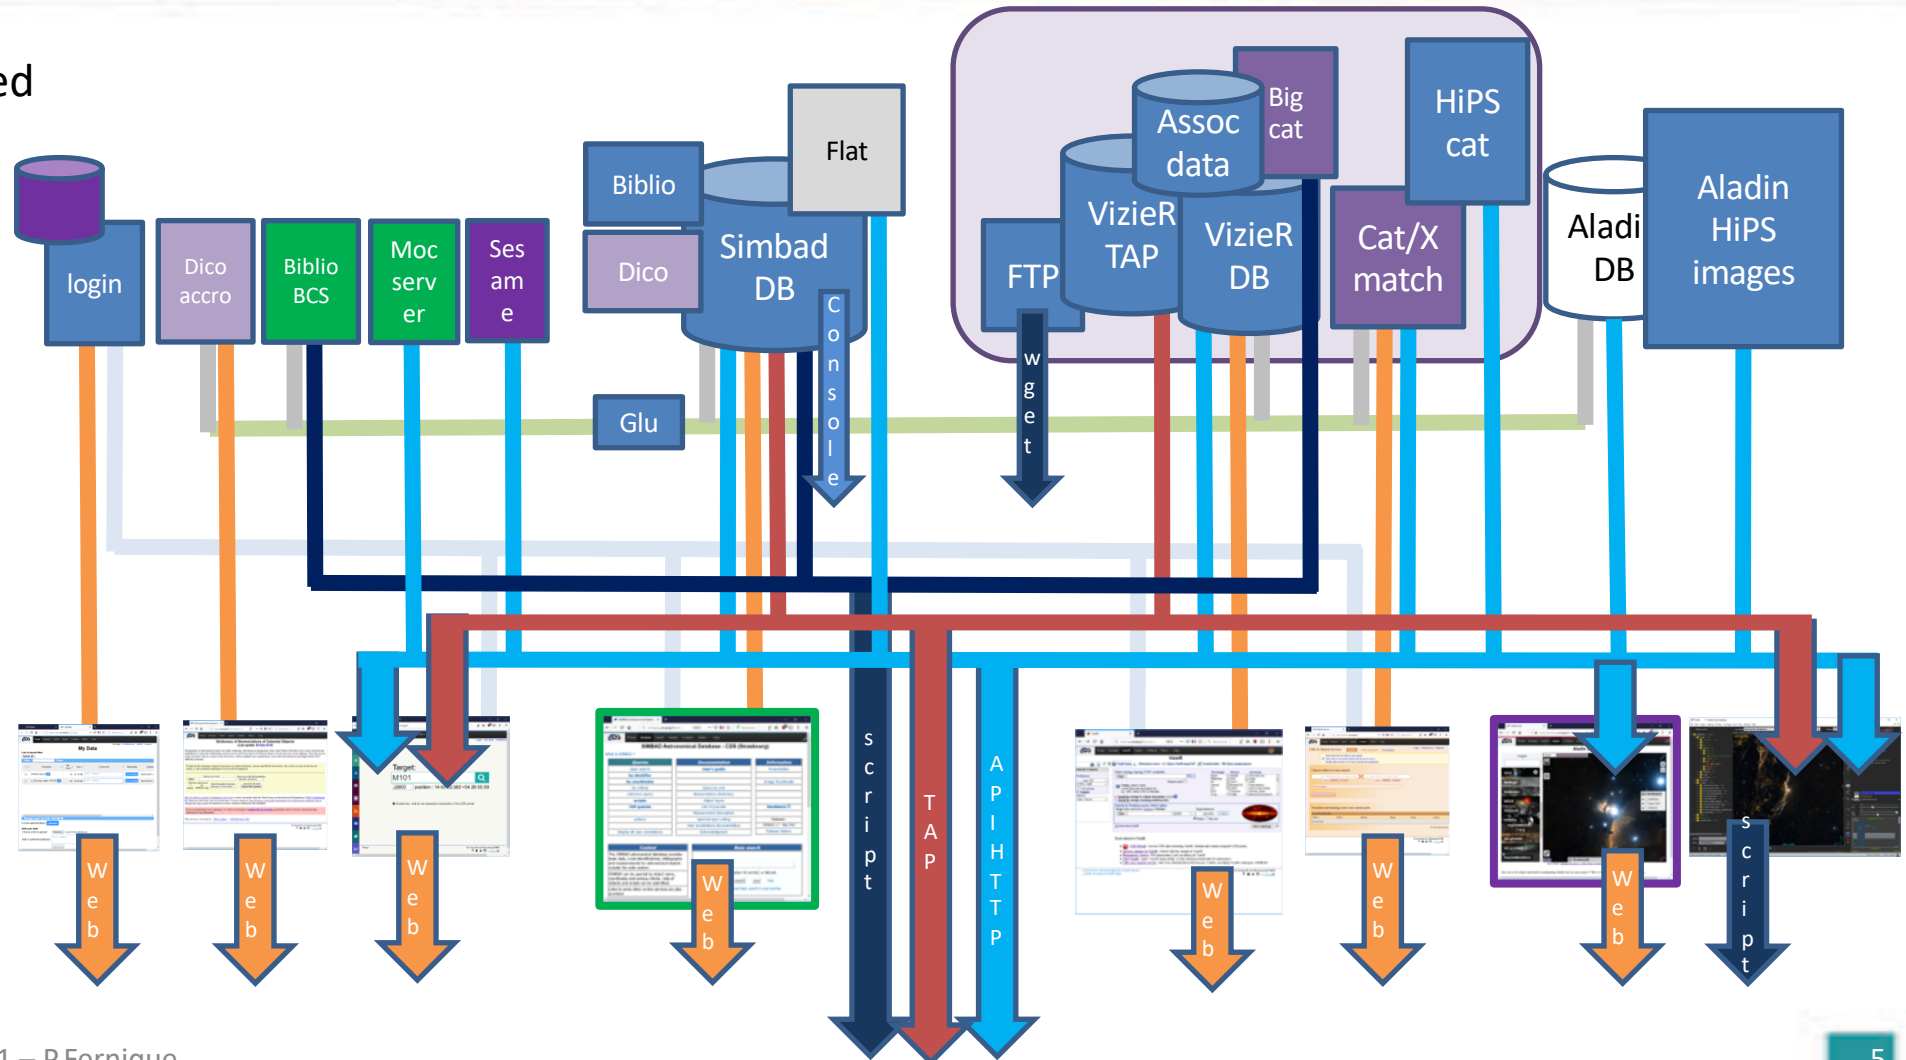

- **6 external sites** (5 VizieR + 1 Simbad mirrors)
- **20 partner HiPS sites** (Aladin tiles)

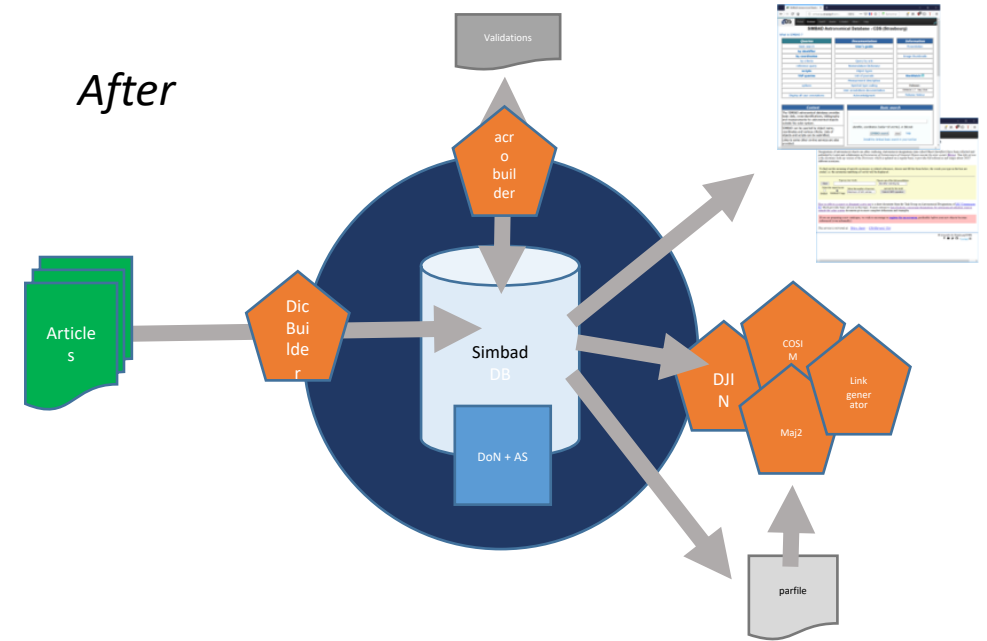

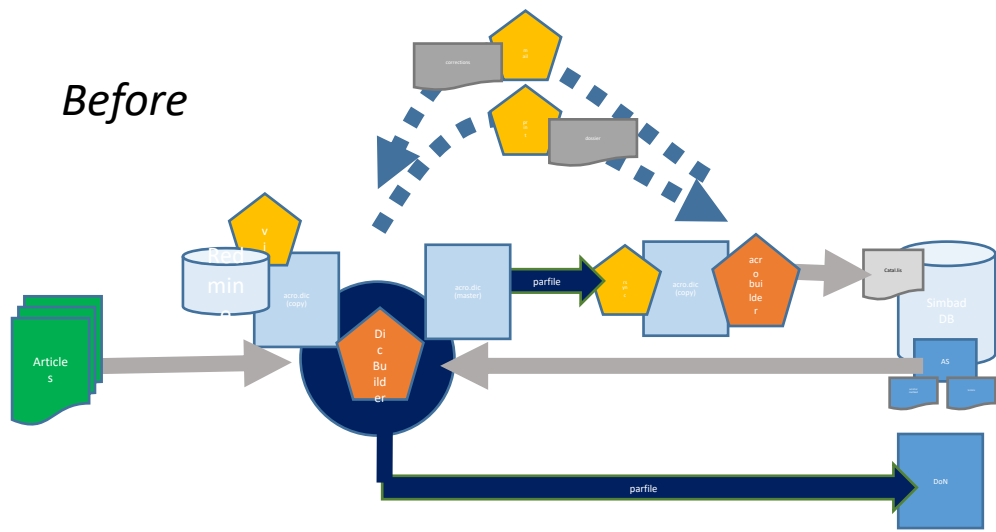

Evolution of IS components

- Renew / updated
- Removed
- Ongoing
- Steady

Last example: Dictionary of Nomenclature redesign

Good points

- A single file, very practical, very solid and durable
- A very precise description, perfectly adapted

Bad points:

- A tool that is slow and complex, ill-suited for rather simple actions (=> update of 20000 ASCII entries)
- A parfile that is reaching its limits, mainly the shared access, but also some fields that are a bit too "house specific"

Several output entities: Simbad Acronyms, Dictionary of Nomenclature, annex files=> multiplication of tools, round-trips, synchronization, cascading maj...

Description of the existing situation, Improvement analysis, Team discussion...

New design:

- Use the Simbad database as a master for the management of all acronyms (AS + DoN + link management), even if only one subpart is not in Simbad acronyms (a flag in the record)
- Semantic content is kept (a priori)
- Syntax/structure BD to be studied

New architecture, Human resource, Road map (prototype, calendar...)

□ Information System recent evolutions

- Redesign of the **objects nomenclature service**
=> re-ingestion in the SIMBAD database (see previous slide – *in progress*)
 - Deployment of **BCS** (CDS biblio)
=> for DJIN and VizieR (*nearly completed*)
 - **MocServer 2** (*complete*) = CDS yellow page service
=> adding temporal coverages
 - **Sesame 2** (*in progress*) = CDS name resolver
 - **VizieR 2** : thinking/redesign of our catalog service (*long term action*)
-
- Stopping/evolving **old/redundant services** (*in progress*):
=> Aladin legacy image server, simplay, thumbnail image service

□ CDS inter-service developments

- Rewriting of **CDS web pages** (*in progress*)
=> Hugo/gitlab solution under evaluation)
- Replacement of the **CDS hotline** by a ticket tracking tool
=> GLPI evaluation (*in progress*)
- Rationalization of our **source code tracking** (*in progress*)
 - Gitlab CDS for all our codes
 - Github Microsoft for a few public lib/tools (Moc, Aladin Lite, ...)

□ CDS Web evolutions

- **HTTPS** support (*in progress*)
=> required for external widgets (Aladin lite) + better Google indexing
- **Unique domain name** "cds.unistra.fr" (*in progress*)
=> better consistency, indexing and control of HTTPS certificates

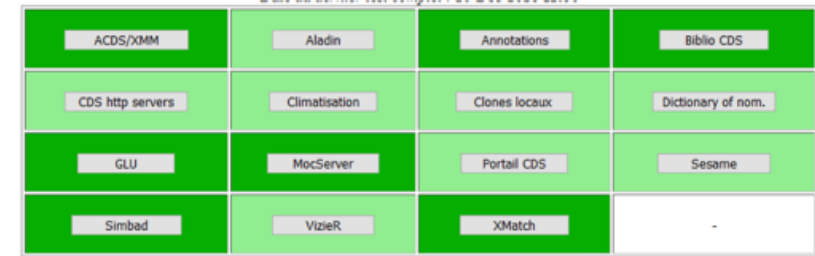

□ Service Continuity - Disaster Recovery Plan

- CDS basic rule: **Total duplication of data** in at least 2 distinct geographical locations (*partial*):
=> PRA + load balancing...
 - **Unistra DataCenter** for an alternative site: alaskybis + 1 VM hypervisor
 - Regularly check that at least one mirror of Vizier and SIMBAD can be used to rebuild the service (in case of a major disaster at Obs) (*to improve*)
 - Think about duplicating the last unduplicated services: Xmatch + queryCat + CDSlogin + IRODS (*todo asap*)
- **Survival files**: 37 cards (*operational*)
=> simple and efficient method for minor failures

□ Operational management

- Close and efficient **synergy with the Obs infra team**
- **Supervision** (*fully operational*):
 - Global => GluSupervisor
 - Detailed => specific to each service (nagios...)
 - Technical (hardware) => zabbix
- Statistics and **activity measurement** tools (*fully operational*):
 - Adjustment of the Matomo tool configuration (GRPD compliance)
 - CDS dashboard

ACDS/XMM	Aladin	Annotations	Biblio CDS
CDS http servers	Climatisation	Clones locaux	Dictionary of nom.
GLU	MocServer	Portail CDS	Sesame
Simbad	VizieR	XMatch	-

□ CDS dashboard

Statistics on all CDS services at a glance

CDS main metrics (Oct 2019 - Sep 2021)

compared to Oct 2017 - Sep 2019

Main Services →	SIMBAD	VizieR	Aladin	Total (main services)
<i>users / month</i>	146k (-13%)	30k (-10%)	230k	>230k
<i>queries / day</i>	393k (-46%)	569k (+9%)	925k	1.9M
<i>load / day</i>	5.3 GB (-34%)		100 GB	>105 GB
<i>data volume</i>	27 GB (+12%)	53 TB (+14%)	390 TB	435 TB
<i>data content</i>	12.6 M obj. (+7%)	21.3k cats (+3%)	990 HiPS	
<i>reliability</i>	99.44 %	99.65 %	99.61 %	> 99.44%

(Bots have been removed of these stats)

users/month Based on unique IP (Adv.Users = only based on "advanced scientific queries") on the main site

queries/day Based on effective DB queries (object queries, catalog queries, HiPS tile queries...)

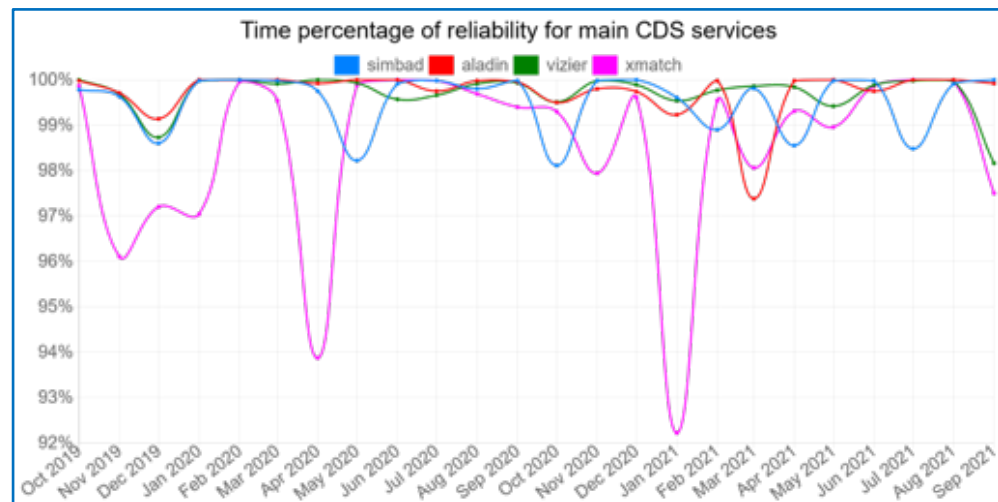

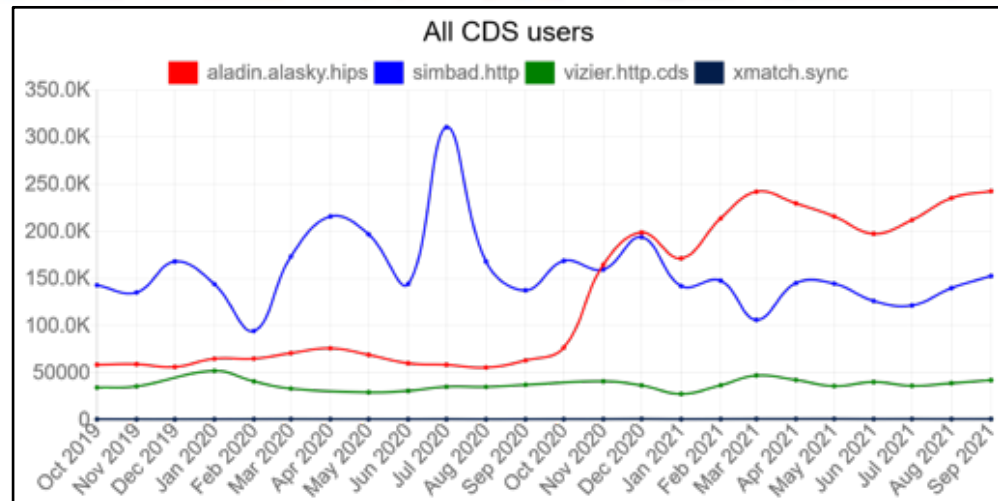

load/day Downloaded from CDS servers

data volume Volume of service (data + index)

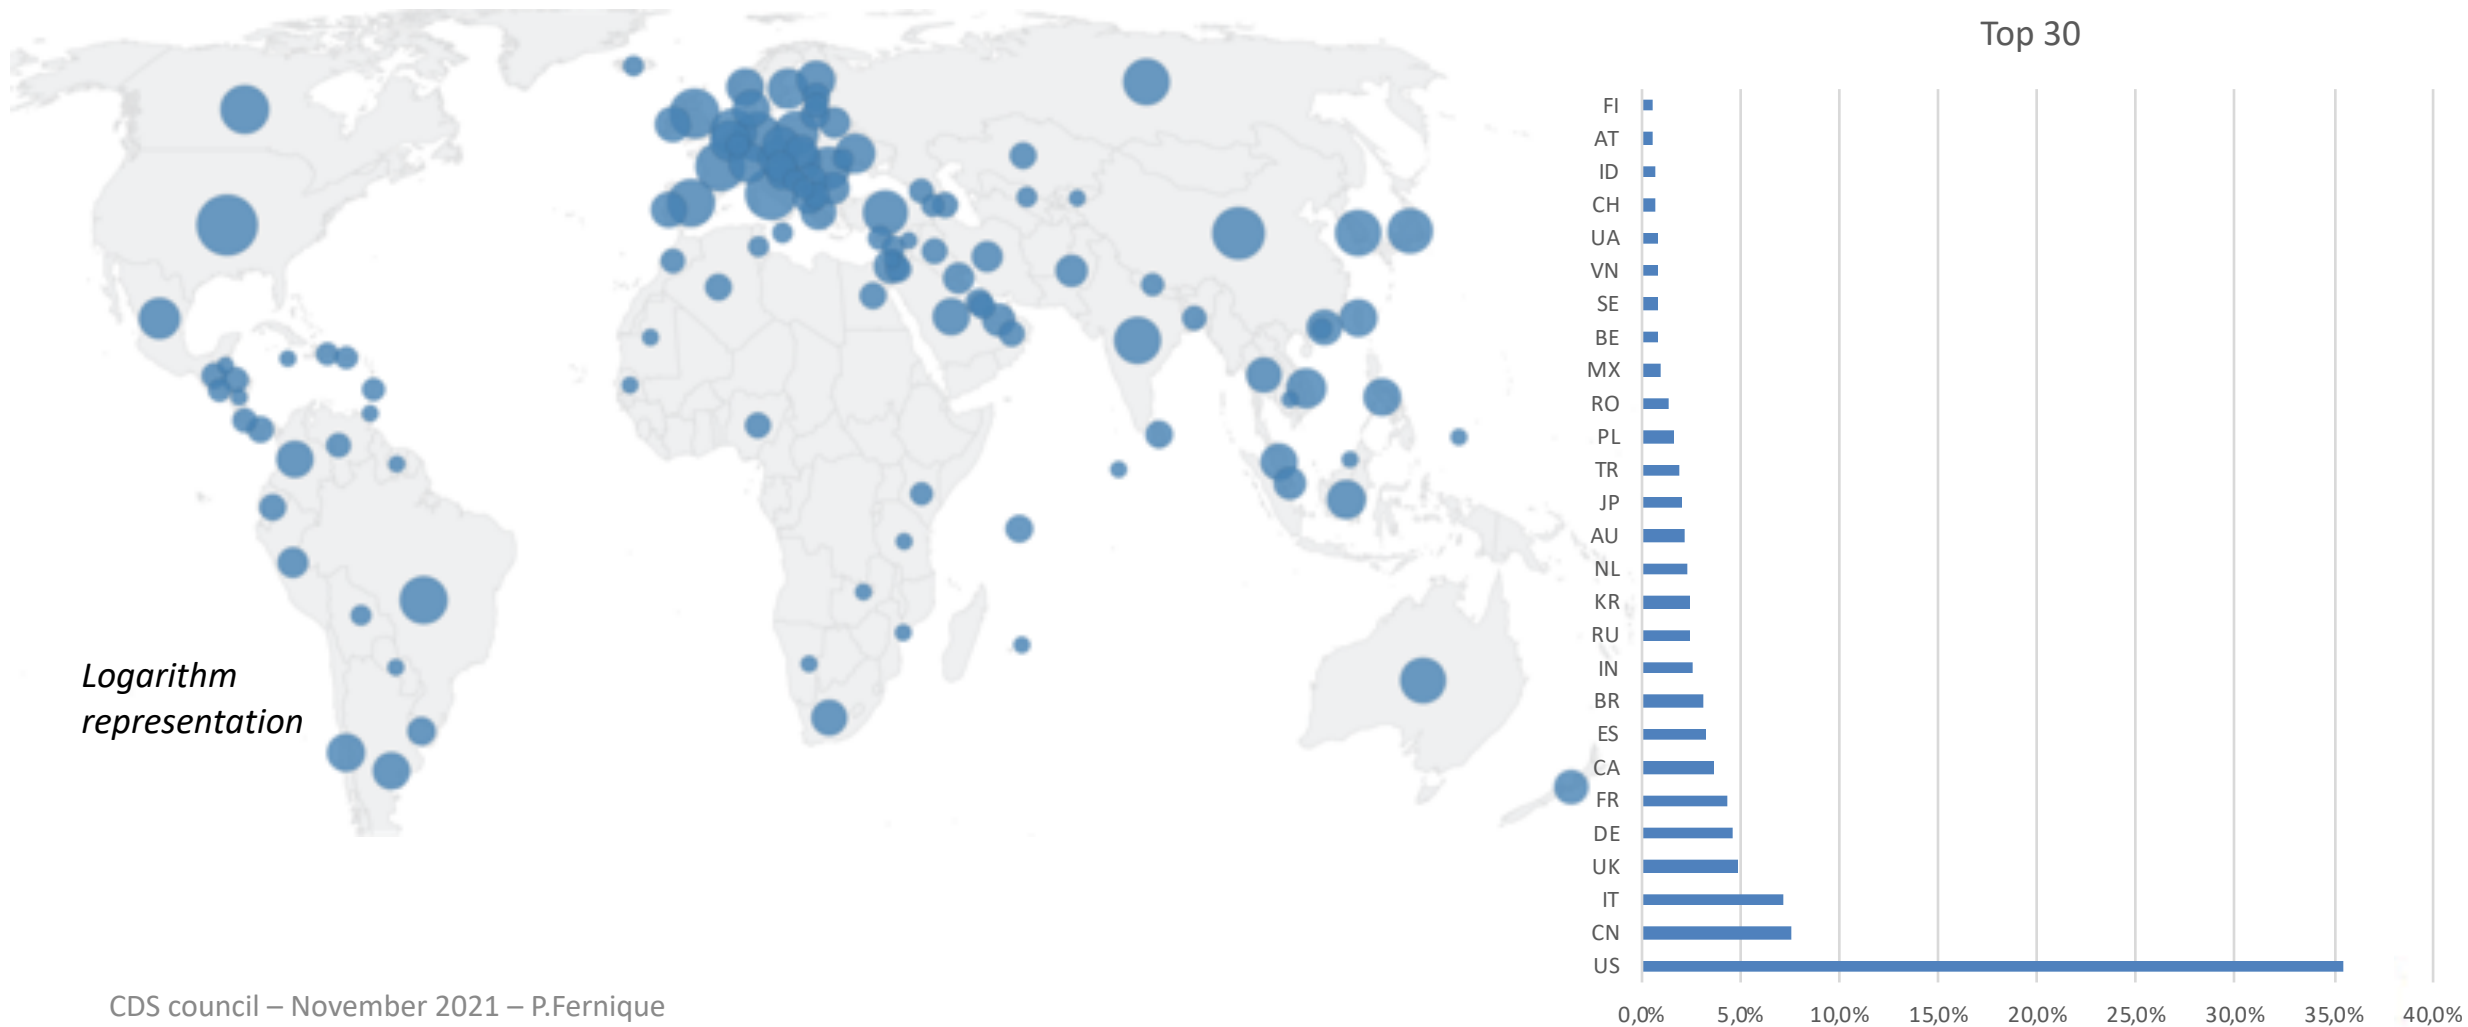

data content Number of service "items"

□ Questions ?

The CDS Information System

SIMBAD : the bibliographic database

A meta-compilation of astronomical objects of interest that have been studied in the literature

**CDS Council
November 2021**

CDS team

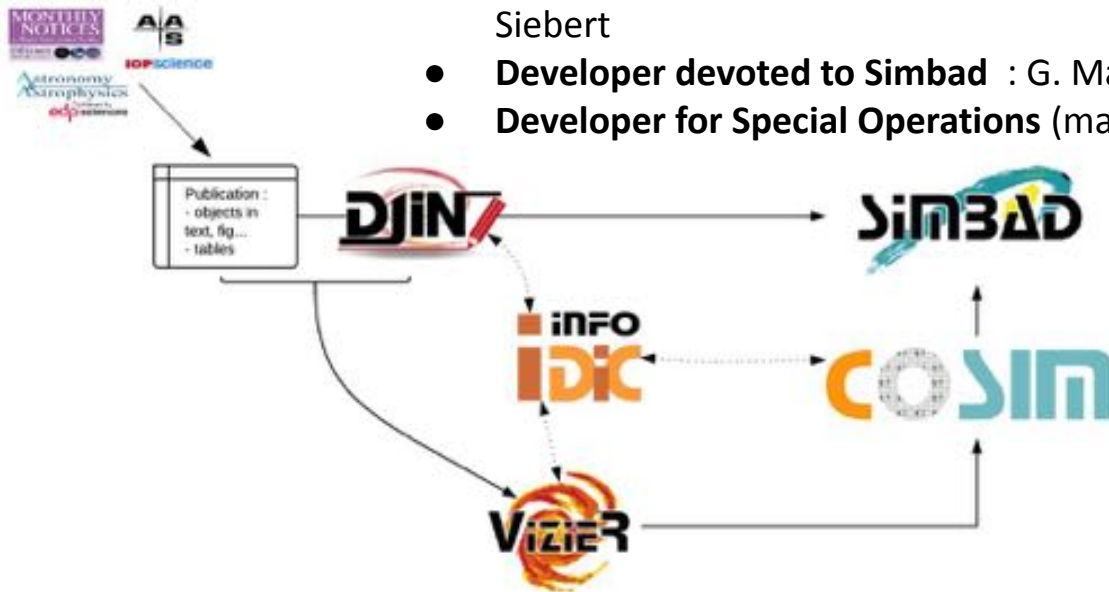

The Team

- **Bibliography & coordination** : S. Lesteven (engineer)
- **Scientific content** : C. Loup (astronomer)
- **Database & softwares** : A. Oberto (developer)
- **Nomenclature** : B. Vollmer (astronomer)

- **Documentalists (Data Stewards)** :
 - Nomenclature : M. Brouty, F. Marquis
 - Ingestion of references via DJIN : Aline Eisele, Evelyne Son, Magali Neuville, Philippe Vonflie
 - Ingestion of lists of objects via COSIM : C. Brunet, E. Collas, F. Marquis, K. van der Woerd, M. Buga, E. Perret

- **Astronomers** : C. Bot, L. Cambrésy, S. Derrière, F. Genova, G. Monari, A. Nebot, P. Ocvirk, A. Siebert
- **Developer devoted to Simbad** : G. Mantelet
- **Developer for Special Operations (massive Xid)** : T. Boch

Workflow : References

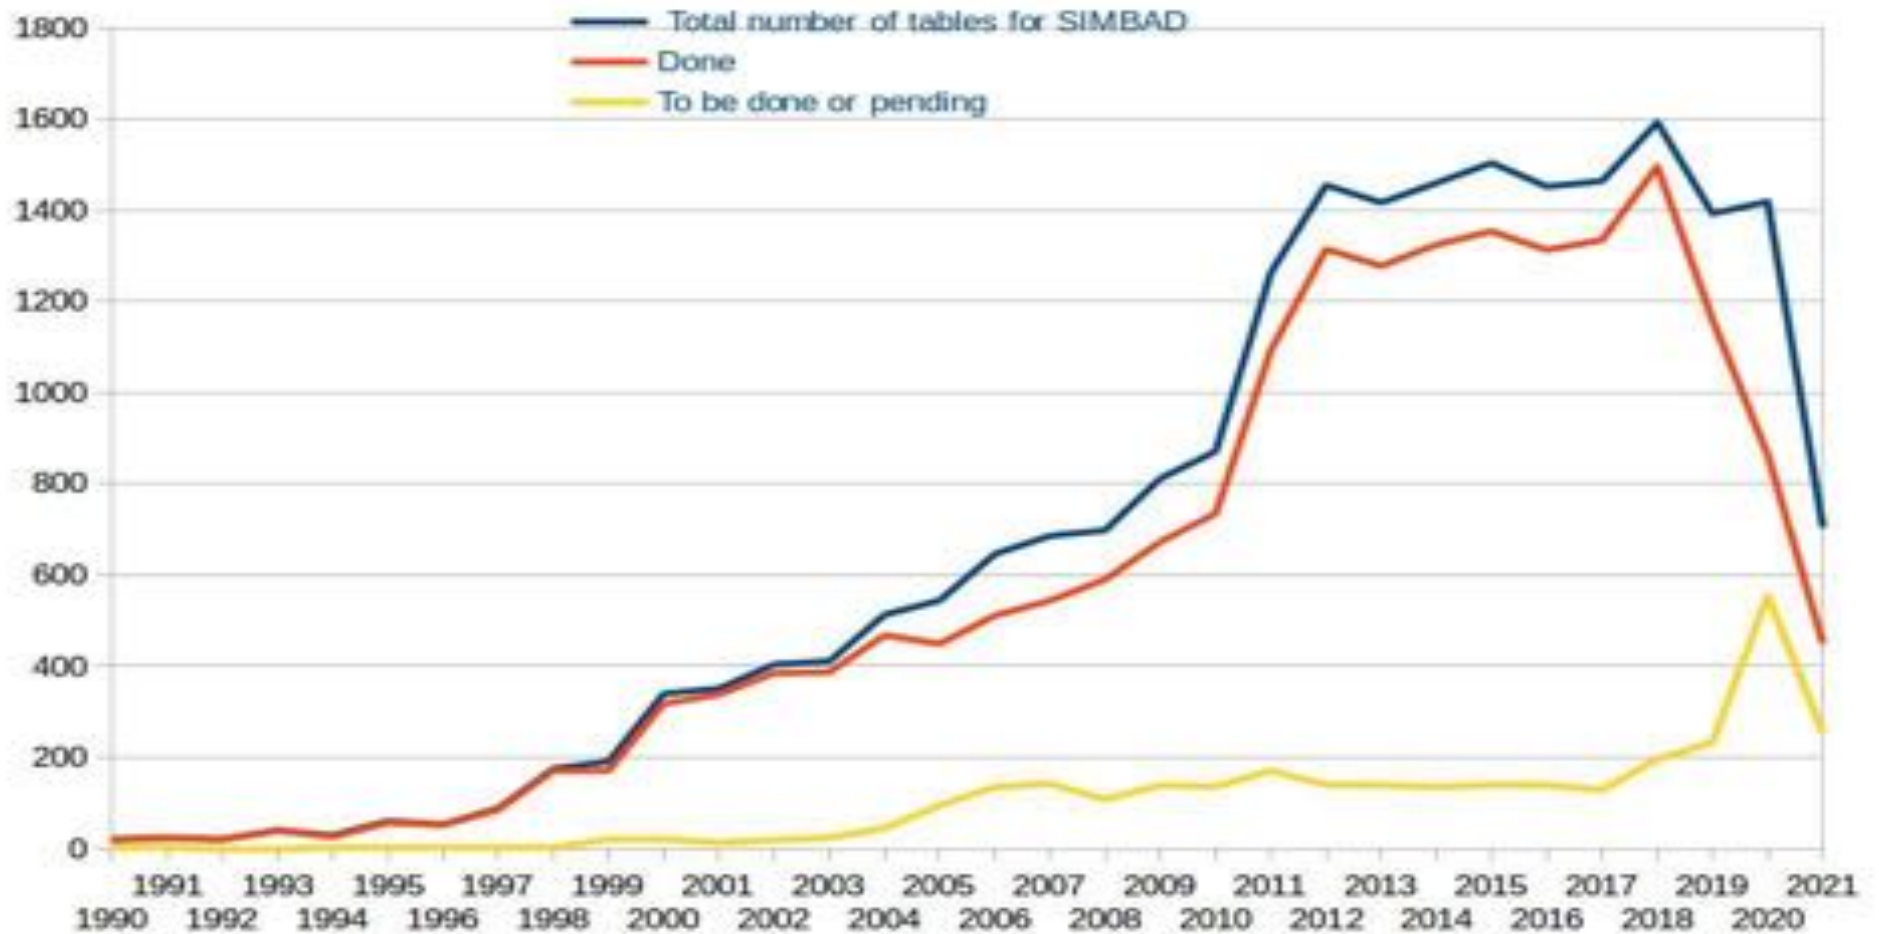

Number of references by year of publication

Workflow : objects

Number of tables published in articles for one year selected for SIMBAD by year of publication

The Content in Numbers

- References : **15,000** (total 397,000)
- Objects : **1.3 million** (total 12.9 million)
- Identifiers : 8.2 million (total 45.1 million)

- Articles appraised : 730
- Added Priority 1 : 520
- Ingested : **735**

Increasing number of objects of interest in tables :

- From large astrometric, spectroscopic, variability, surveys
- 36 publications with more than 100,000 objects ingested in SIMBAD
- $\frac{1}{3}$ from articles published from 2018 to 2021

Reorganisation of Object Types :

- Fully integrated in COSIM
- Automatic storage of objects with contradictory classifications in the literature
 - > very fast scientific expertise
 - > maintenance of the quality of the scientific content easier and at a high level

Special Operation on the TESS Input Catalogue (TIC) :

- New planets or candidates + expected large catalogues of variable stars
- 4 million TIC identifiers added on the basis of the 2MASS identifier to facilitate the ingestion of the new references and tables of objects

VizieR content - I

VizieR content - II

Ingestion statistics :

- A steadily increasing volumetry : +1123 in past year
 - Total : 21,421 catalogues, 48,164 tables, (51 billion records)

Very large catalogs ingested in past year:

- Gaia EDR3
- GPS1+
- ESO VHS DR5
- ESO VEXAS DR2
- ATLAS-REFCAT2
- Gaia EDR3 distances (long)
- Gaia DR2 Extinctions (long)
- Re-ingestion of CatWISE following correction of positions

“Thick” catalogs: > 150 columns

- RAVE DR6 (several 100 columns)
- RELICS (150 cols from 46 tables)

In progress:

- SDSS DR16 (final stages)
- Pan-STARRS DR2 (contact re-established)

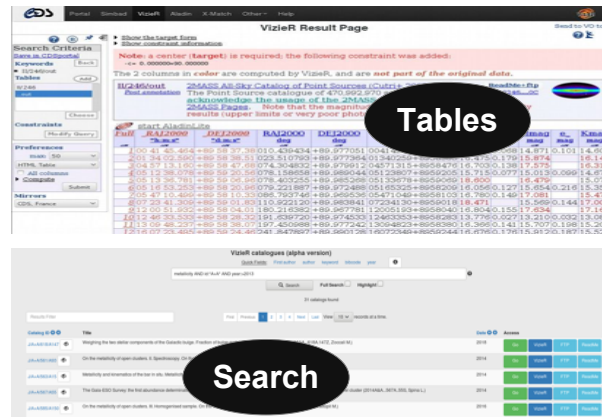

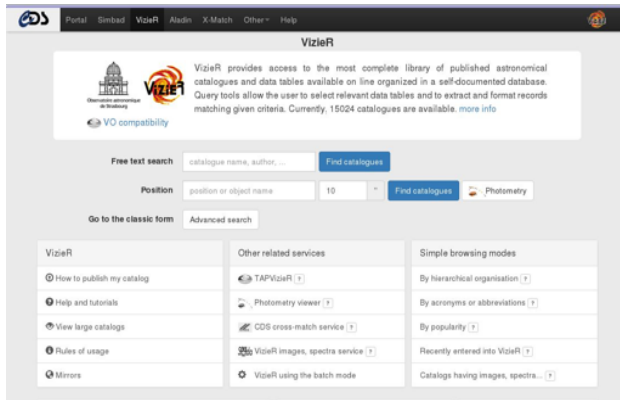

Planned for 2022:

- Gaia DR3
- GSC 2.4 (3.5 billion objects)
- ESO phase 3, new DRs

VizieR usage statistics

VizieR statistics (from the CDS statistics collector)

VizieR queries repartition by output (classic web form and HTTP API)

Total : ~533K queries/day

TAP : ~16.7K queries/day

Associated data (spectra/images): ~1,200 queries/day

Importance of the Virtual Observatory (conesearch+VOTable)~70% of the queries

VizieR queries repartition by agent (classic web form and HTTP API)

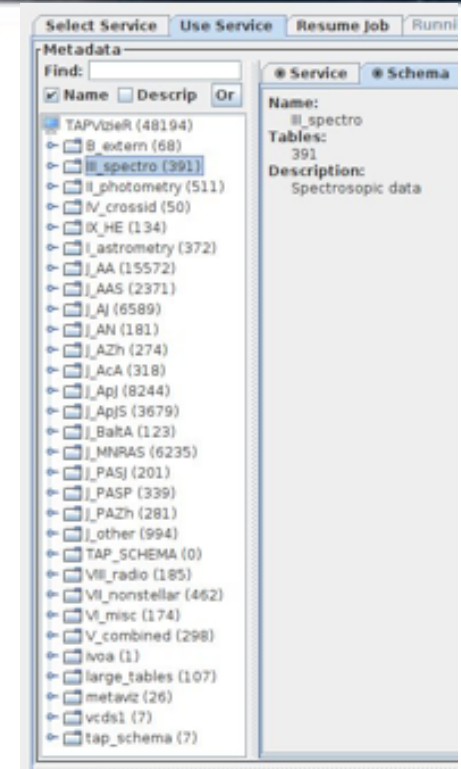

Importance of Python(41%), TOPcat (6%), curl+wget (10%)

Recent activity

- Solar System catalogue built with VOParis (VESPA): collection of VizieR catalogue gatered into a single table , curated by Paris
- The TAPVizieR categories have been re-organized following the VizieR category
- The VO registry entry for VizieR has been updated and now includes the catalogues' MOCs, spectral range, mirrors and DOIs.
- Cdsyreadme library improvement for authors to generate CDS and MRT table format (AAS) - available in guthub, pip (PyPI)
- Workflow update:
 - workflow process improvement to fill the basics catalogue metadata (FX.Pineau) : UCD, description, units ..
 - Adapt the article xml extraction (getapj) to use the BCS (Bibliographic Center Supervisor, G.Mantelet)
- Provenance catalogue information available in landing page
- Very first steps of the vizier ingestion code renewal :
a long work just beginning to put the vizier source code in the long term -
(difficult to do by a unique person due to the heavy maintenance)

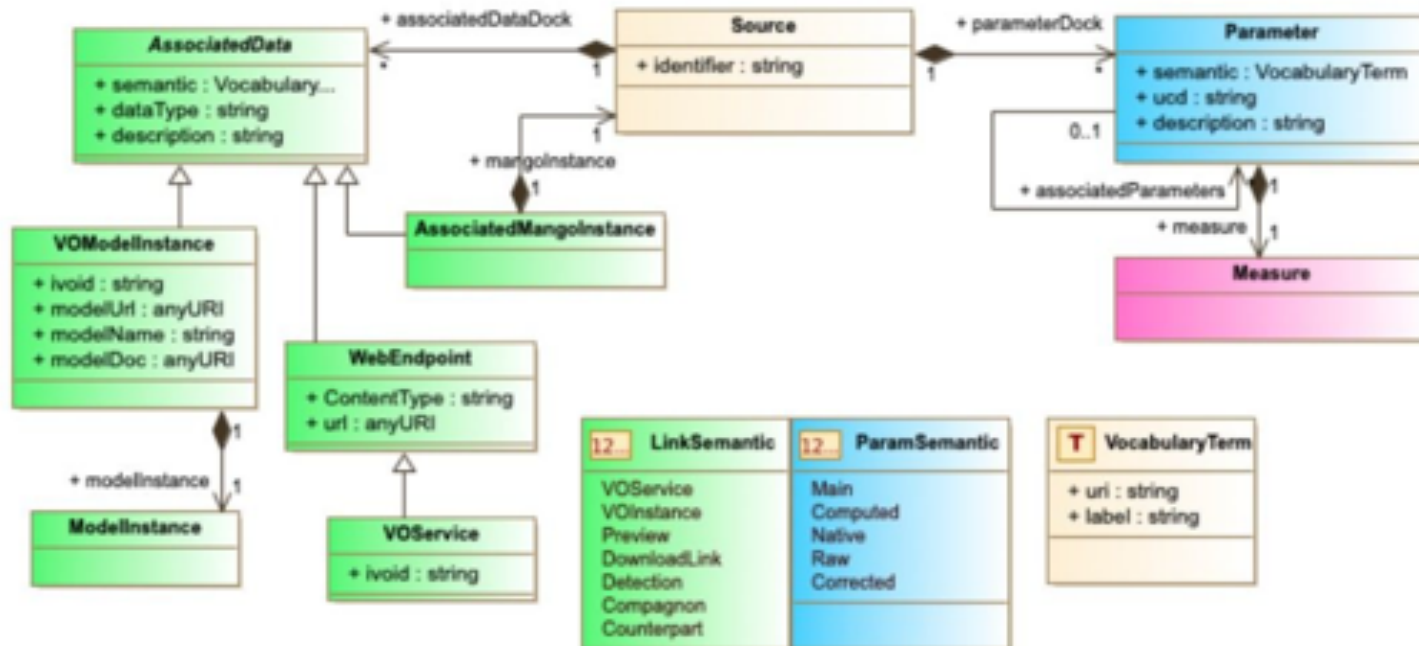

Recent activity

Other works :

- Exploring rich VO output using Data-models including filter and Provenance information (L.Michel, F.Bonnarel, M.Louys)
- build an output (VOTable) to highlight measured (eg: photometry) with precise metadata
- Exploring large table access in PostgreSQL

Outlook – 2021 and (a bit) beyond

- **Top Priority = continued support of FAIR data publication from major journals and data producers through variety of access modes**
- => continued support and development of in-house tools to assist catalogue indexation and ingestion
- Med to long term goals:
 - Code renewal (Very high priority, new engineer required)
 - Homogenization of pipelines (large catalogs, journal catalogs)
- Very large datasets: High Cadence Wide Field surveys (e.g. LSST)
 - LSST: 40 billion objects x 250 visits = 10^{13} records
 - Gaia DR3-4 /PS DR2: 2×10^9 objects 100 visits = 2×10^{11} records
 - Should CDS develop such capacity?
 - How commonplace / rare will such datasets be in 10 years?

Aladin:

*Highlights, statistics,
perspectives*

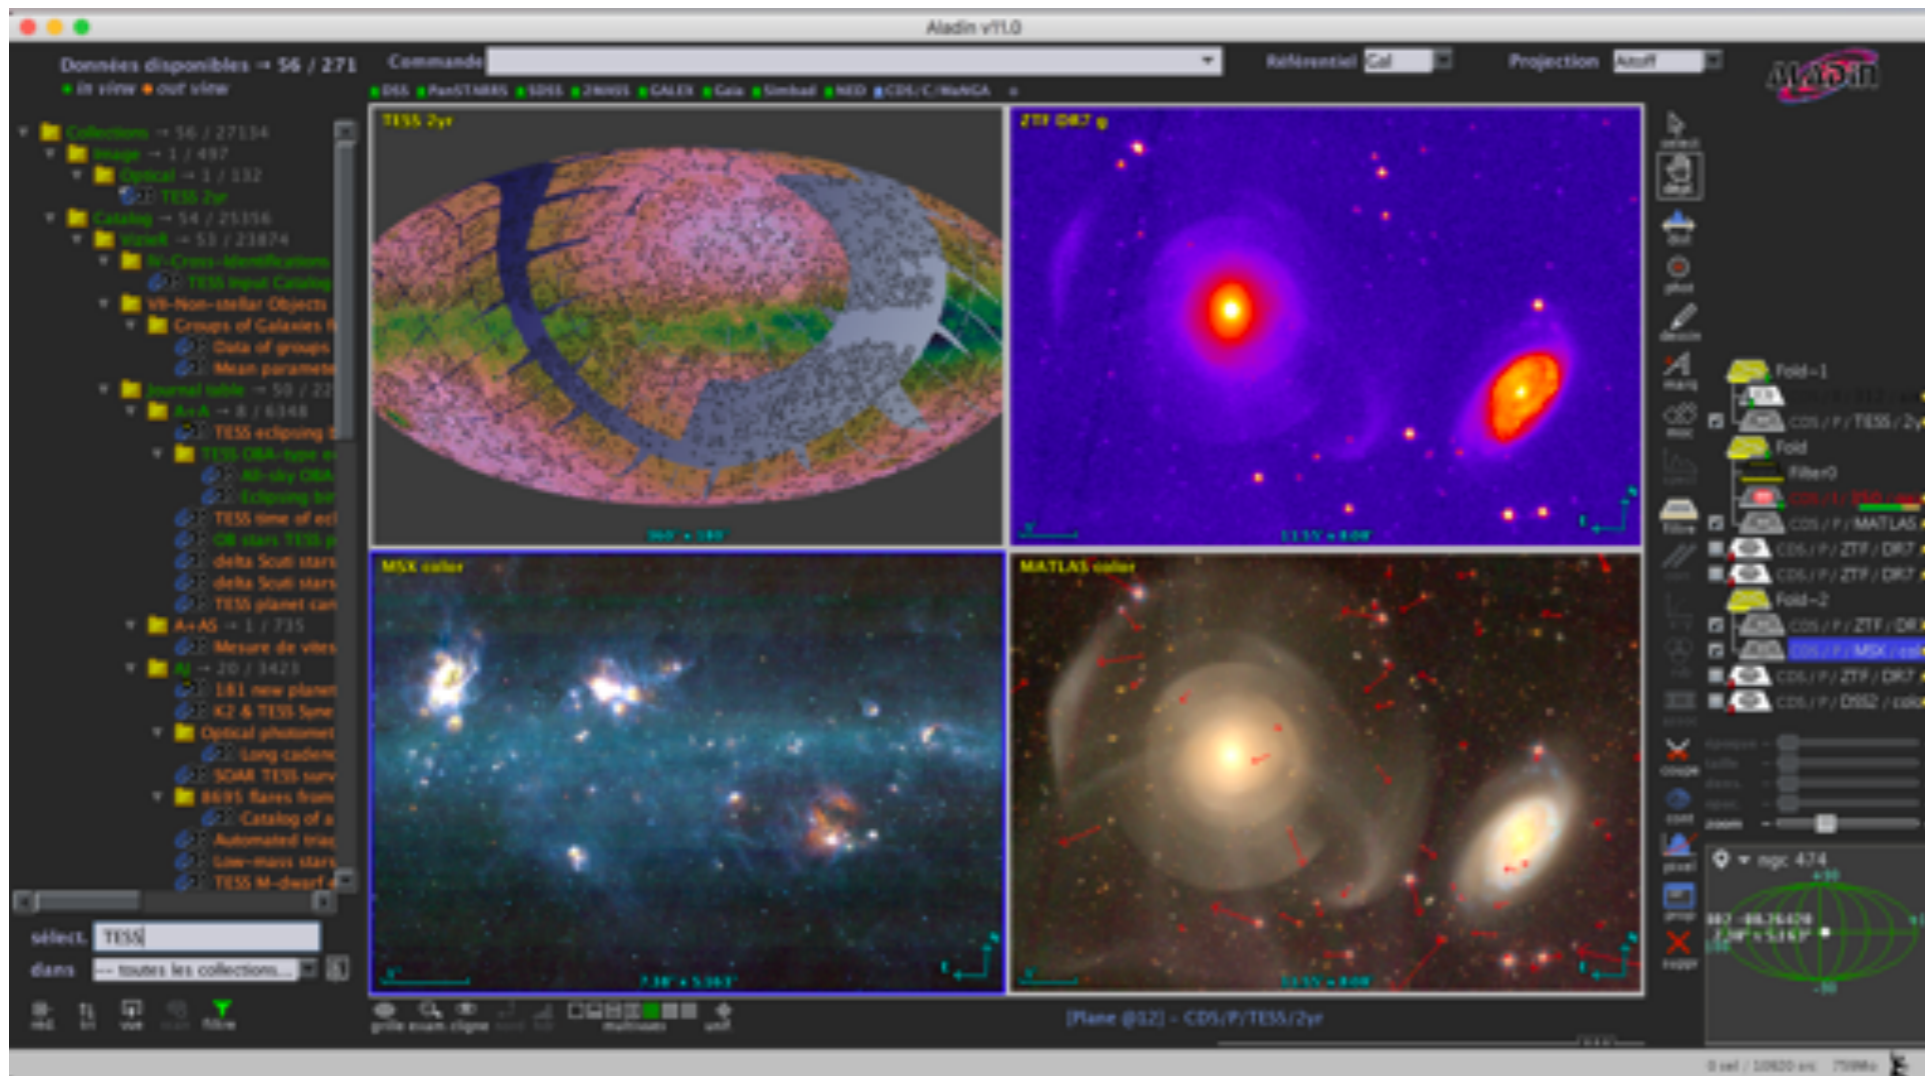

CDS council - November 29, 2021

Thomas Boch, Caroline Bot, Pierre Fernique, Mark Allen, Matthieu Baumann, François Bonnarel Mihaela Buga, Sébastien Derriere, Hendrik Heinl, Katharina Lutz, Ada Nebot, François-Xavier Pineau, Christophe Saillard, Thomas Keller

Aladin project

HiPS2FITS
HiPSgen, ...

Download
Aladin Desktop
on your machine

Preview with
Aladin Lite
in your browser

HiPS

- 47 new HiPS including:
 - MSX, 4 bands
 - Gaia EDR3 flux map
 - ZTF
 - TESS ...
- maintenance operations
 - old HiPS have to be done again (e.g. 2MASS)
 - metadata cleaning and update (M. Buga)

□ Move to Unistra data center

- as planned by disaster recovery plan
- May 19 2021
- move of one of the All-Sky-Data system (part of HiPS storage)

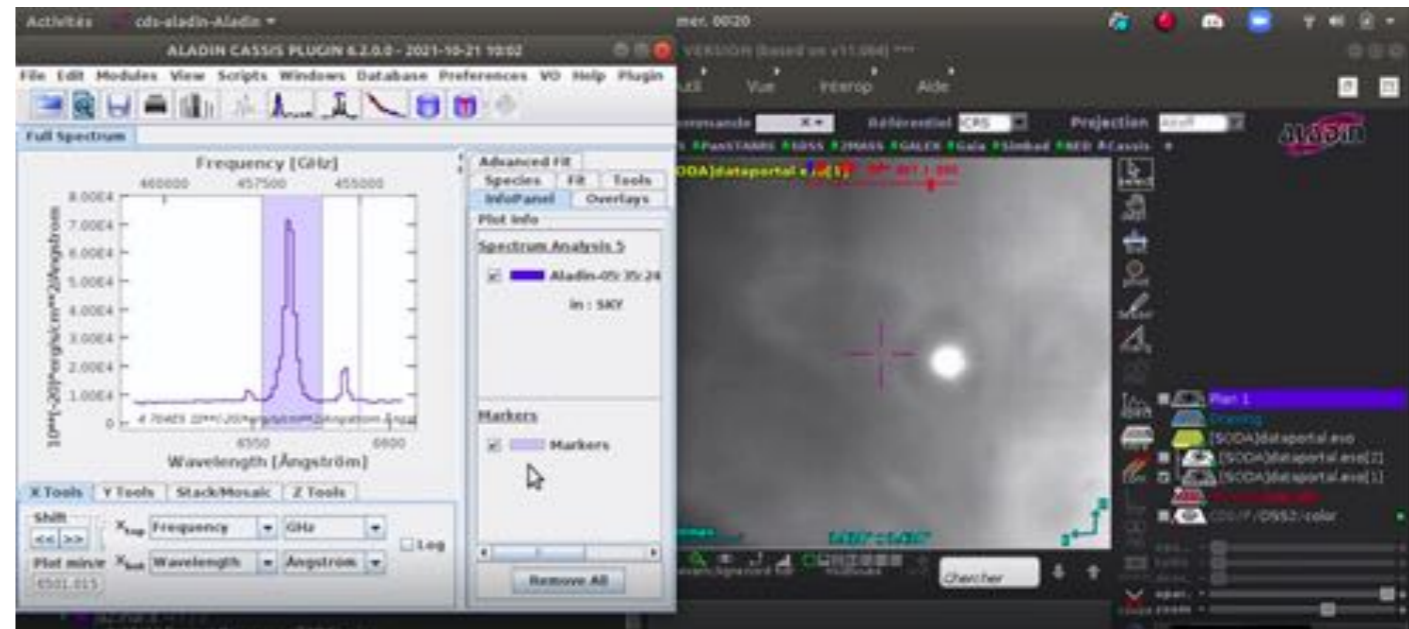

□ Aladin Lite

- number of startup from sites embedding Aladin Lite is strongly increasing
 - 25k startup per day (+71%)
- Many new functionalities developed by Mathieu Baumann as part of ESCAPE project. Use of WebGL/WebAssembly
 - support multiple projections
 - support HiPS FITS tiles
 - density map catalog visualizations
 - improved rendering
- Aladin Lite V3 coming soon

□ Aladin Desktop

- Since V11:
 - time domain capabilities
 - now prototype enabling search with time constraints
- Statistical pixel analysis capabilities
 - CASSIS plugin for Aladin
 - presented at ADASS, good user community feedback
- Aladin V12 planned for spring 2022

□ Aladin Desktop / Time domain demo

The screenshot shows the Aladin Desktop software interface. The main window displays a 'DSS2 blue' image of a star field with a white arrow pointing to a specific object. Below the image is a 'Time plot' showing data points over time. The interface includes a menu bar, a toolbar, and a sidebar with a collection tree. A warning message is visible on the right side of the interface.

Warning
You are probably using an uncom planet vs sky. This uncompar release (best phase)

□ Interaction with user community

- Aladin manual in english!!
 - coordinated effort from *H. Heint, C. Bot, M. Buga, K. Lutz, P. Fernique, T. Boch, M. Allen*
 - V10 ready for ESCAPE VO school, soon after for V11
- Conferences, workshops, school
 - ADASS (4 papers), AAS, China VO conference, ESCAPE VO School
- Case-by-case assistance
 - LIGO/VIRGO project
 - NOIRLab + ESA/Hubble outreach pages

□ Planetaria and HiPS

- New interest in HiPS for planetarium sky simulators
 - Digistar 7
 - RSA Cosmos
- Will be implemented in new Strasbourg planetarium
- Workshop “Astronomie en partage” on scientific mediation in planetarium thanks to research data

□ Future

- Aladin Lite V3
- Aladin Desktop V12

- Strategy
 - Jupyter notebooks
 - Renewal of the All-sky data storage (2025-2026)
 - Development of new services centered on HiPS
 - ...

coming soon!

CDS XMatch Service

- Very efficient cross-match of two (possibly large) tables
 - ▶ Any VizieR table and Simbad
 - ▶ User uploaded table
- Smooth operations in 2020-21 with current software
- We doubled the disks capacity

CDS X-Match Service

Choose tables to cross-match

SDSS DR9 X ZMSS

The SDSS Photometric Catalog, Release 9 (Abolfathi, McCarthy, et al., 2012)
794,013,950 rows

ZMSS All-Sky Catalog of Point Sources (Catrizi, 2002)
470,992,970 rows

Visualize and manage your cross-match jobs

Table 1	Table 2	Options	Begin	Status	Actions
SDSS DR9	ZMSS	fixed radius radius: 5 arcsec area: All sky	03/11/2016 at 14:15	completed	Get result

Job executed in 10min11s
Backend to correlate
6min31s to generate file
Result: 66,000,845 rows (19.3 GB)

Web interface

Example

Using curl to match several FITS file with Simbad in Bash

```
for f in file1 file2 file3 file4; do \  
  curl -X POST -F request=xmatch \  
    -F cat1=@$f.fits -F colRA1=RAJ2000 -F colDec1=DEJ2000 \  
    -F cat2=simbad \  
    -F distMaxArcsec=25 \  
    -F RESPONSEFORMAT=csv \  
    http://cdsxmatch.u-strasbg.fr/xmatch/api/v1/sync \  
  > $f_vs_simbad_25arcsec.csv \  
done
```

Other languages

For Python, Ruby and Java, see here:
<http://cdsxmatch.u-strasbg.fr/xmatch/doc/xmatch-API-usage-examples.html>

Annual usage statistics

Web Interface annual statistics

Web interface

- #nJobs still growing
- Produces >70 million associations / day

Annual usage statistics

HTTP API annual statistics

HTTP API (synchronous jobs)

- Usage still growing too
- #nJobs: >5000 jobs/day (+100%)
- #nIPs: > 900/month
- ≈ 80 million associations / day
- But pics of activities by a low number of users

□ On-going developments

- 2018:
 - ▶ Start Rust (+WebAssembly) evaluation
 - ▶ Port the CDS kd-tree code from Java to Rust (and WebAssembly)
- 2019:
 - ▶ CDS Healpix Library
 - ▶ New cross-match engine prototype (ExXmatch): presented at ADASS
 - ▶ Start of a Serialization/Deserialization engine
- 2020:
 - ▶ Continue Serialization/Deserialization engine
 - ▶ Expression evaluation library (SQL SELECT/WHERE like functionalities)
 - ▶ Generic catalogue interrogation (VizieR large cats + Xmatch)
 - ★ column selection (reduce the number of output columns)
 - ★ post-filtering (reduce the number of output rows)

On-going developments

- 2021: Start an astrometrical Rust library
 - ▶ done:
 - ★ proper motion propagation
 - ★ parsing / on-the-fly generation of IAU names
 - ▶ to be done: reference frames conversions
 - ▶ purpose
 - ★ better understand and support the existing C and Java libraries (F. Ochsenbein)
 - ★ allow queries/xmatches taking into account proper motions

The screenshot shows a Jira issue page for the project 'C9GACS-700'. The issue title is 'Hardcoded 4.740,470,446 should be GPDB parameter :Nature:ProperMotion_Constant (= 4.740,470,464)'. The issue is categorized as a 'Software Change Request' with a 'Low' priority and 'Minor' severity. It is currently 'Unresolved' and has a resolution of '2.15.0'. The description mentions that a hardcoded number (4.740,470,446) was found in the software and documentation, and it should be replaced with the GPDB parameter 'Nature:ProperMotion_Constant = 4.740,470,464'. The issue was created on 18/Jan/21 at 5:04 PM and last updated on 03/Sep/21 at 1:25 PM. The assignee is Juan González-Núñez, and the reporter is Jts de Bruijne.

Issue Details:

- Type: Software Change Request
- Priority: Low
- Affects Version/s: None
- Labels: None
- Severity: Minor
- Status: **Unresolved** (View Workflow)
- Resolution: 2.15.0
- Fix Version/s: 2.15.0

Description:

François-Xavier Pineau (CG) discovered that some of the DPAC software and public documentation contains the hardcoded (and obsolete) number 4.740,470,446 (from Hipparcos) instead of the GPDB parameter `Nature:ProperMotion_Constant = 4.740,470,464`. Using `SVNSearch`, I find at least four occurrences, one of them being GACS code.

In `DIR/software/epoch_prop/epoch_prop_functions_all.sql` I find declarations like:
`sv DOUBLE PRECISION DEFAULT 4.740470446`

People:

- Assignee: Juan González-Núñez (Assign to me)
- Reporter: Jts de Bruijne
- Votes: 0 (Vote for this issue)
- Watchers: 1 (Stop watching this issue)

Dates:

- Created: 18/Jan/21 5:04 PM
- Updated: 03/Sep/21 1:25 PM

Agile: View on Board

□ On-going developments

- 2021: MOCLibRust a common lib for MOCPy, MOCCLI and MOCWasm
 - ▶ No directly xmatch related, but will be used in xmatch
 - ▶ Framework: both the ESCAPE project and the validation of IVOA standards
 - ▶ From a single common core library in a single language (**Rust**) we developed:
 - ★ a Python module (to target astronomers)
 - ★ a library for Web Browsers (e.g. for Aladin Lite, GW portal)
 - ★ a command line tool pre-compiled to target several architectures
 - ★ the library itself can be directly used in Rust projects
 - ★ (possible C, PSQL, ... wrappers)

MOC: Multi-Order Coverage map
Version 2.0

- We plan to continue this **strategy** for the new xmatch service developments: write a **single code usable in multiple languages / platforms**, on our **servers, web applications** or **users machines**.

□ On-going projects

- Collaboration with GALECOS/XMM SSC members to build SEDs distributed by ESA: <https://www.cosmos.esa.int/web/xmm-newton/xsa>
- Participation to the European project XMM2Athena
 - ▶ WP2: provide cross-matches to other WPs
 - ▶ rely on CDS expertise (ARCHES projects, ...)
- FINK and Vera C. Rubin brockers
 - ▶ participate to brockers meetings
 - ▶ support and prospects for using CDS tools (FINK is already using the xmatch service)
 - ▶ Scalability issues to be analysed

R&D @ CDS

and various developments

André Schaaff on behalf of the CDS Team

CDS Scientific Council 2021

□ Foreword

- Technological **evolutions** are **fast & various** (interactions, visualization, mobility, components, Big & Open Data, Clouds, etc.) with many actors in both commercial and Open Source domains.
- The **R&D activity** is well identified, structured and involves **several persons** of the **staff** with the help of **interns** and **short contracts**.
- A **continous training** through the presentation of the results.

□ Internship programme

- (Only) 6 interns in 2021 worked with us on a few topics, R&D and various developments
- In 2020 12 (3 years FTE) in telecommuting, 2021 was a transition year and we expect the return to the usual level in 2022
- + short Summer contracts to push the work on the production side.
- A way to hire engineers on projects (in a tight IT Job Market).
- Remark: not exhaustive, other developments and experiments have also be done.

□ VizieR Access to remote large tables

- A mid-term R&D with in 2019/20 in an experiment around remote large table access in databases
- Integration of large tables stored in CDS-binary format wrapped in PostgreSQL database using the Foreign Data Wrapper technology.
- a possible solution for very large tables: Euclid, LSST...

G. Landais, G. Mantelet, F.-X. Pineau
Interns: **Alexandre Lepicier (UTC) in 2020**
Adrien Vizie-Fontanesi (ENSIIE Paris) in 2019

□ VizieR Access to a distributed database

- Followed in 2021 by an experiment around a distributed database for large tables
- Exploration of the GREENPLUM technologies, based on PostgreSQL, which enables to distribute large tables on several database nodes

G. Landais, G. Mantelet, O. Marchal
Intern: Yann Miglionico (IUT Schuman Illkirch)

□ VOSpace

- A prototype was developed in 2020 by the same intern, Grégory Adam
- In 2021, he worked on its performance improvement with Apache JMeter
- Outcomes: ok for the prototype, not yet tested on other VOSpace implementations

Figure 16 : Temps de réponse moyen en fonction du temps pour des requêtes sur les fichiers avec un utilisateur faisant des requêtes toutes les secondes, un autre toutes les 100ms et 7 utilisateurs faisant des requêtes toutes les secondes

Figure 18 : Utilisation du processeur et de la mémoire en % en fonction du temps pour un scénario mixte

□ VOSpace, to a micro-service version

- Developed by Grégory Adam in the frame of a short contract

Technologies:

- Docker (container system)
- Quarkus (Java + Netty)
- NginX (web server)
- MongoDB (NoSQL database)

Outcome:

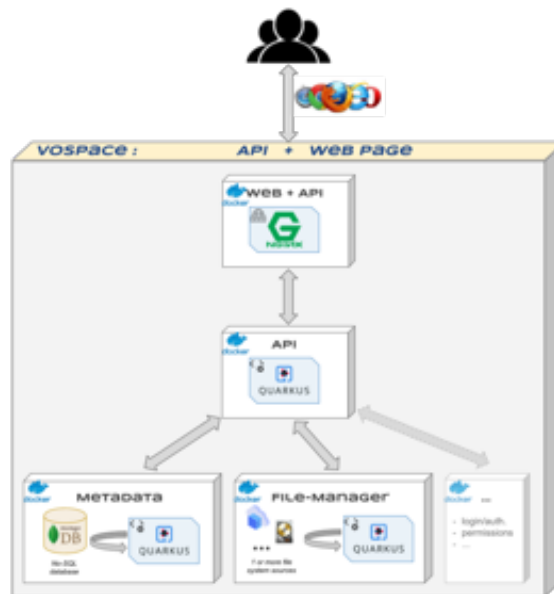

- Good functional prototype
- Possibility to use with other CDS services
- Need additional work especially on the VO and integration aspects

First Prototype

- Monolithic
 - Big application sources
 - Heterogeneous sources
 - A failure impact all the application
 - Heavy database for key/value data
 - Installation difficulties (all tools must exist and configured)

New Prototype

- Modular
 - One application for each task
 - Simpler and shorter sources
 - A failure impact only one application
 - Faster database
 - Able to deal with multiple file systems
 - Easier and faster to deploy thanks to Docker

G. Mantelet

Short contract: Grégory Adam

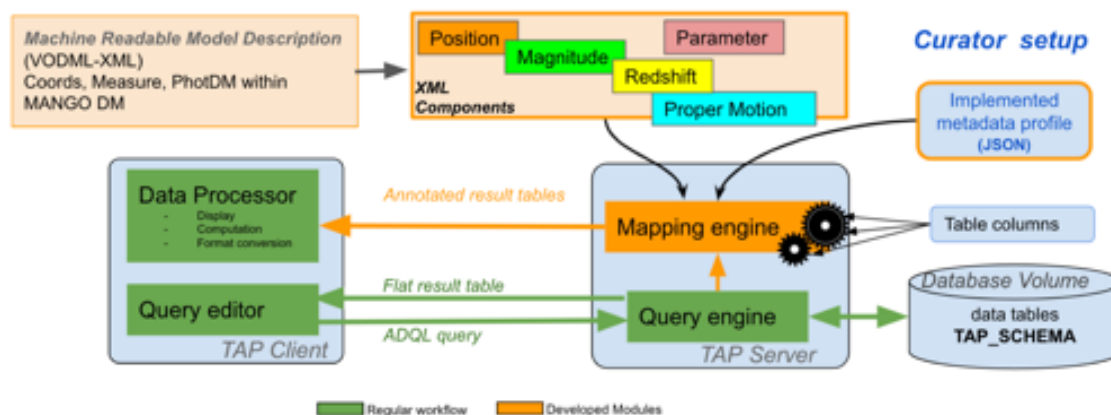

□ Annotating TAP responses on the fly with IVOA data models

- Goal: Define a way to annotate a VOTABLE TAP response with IVOA data model information
- Test case deals with catalogs of astronomical sources
- **Coords, Measure, Photometry data models** propose classes to bind the various fields from the tables into attributes.
- The **MANGO data model** (work in progress) aggregates these features within an object, with one source identifier and some associated data when necessary.

□ Annotating TAP responses on the fly with IVOA data models (2)

- The description of model elements is represented and embed in XML within the VOTable TAP response to be compliant with TAP output

Annotation scenario

BoF at ADASS 2021

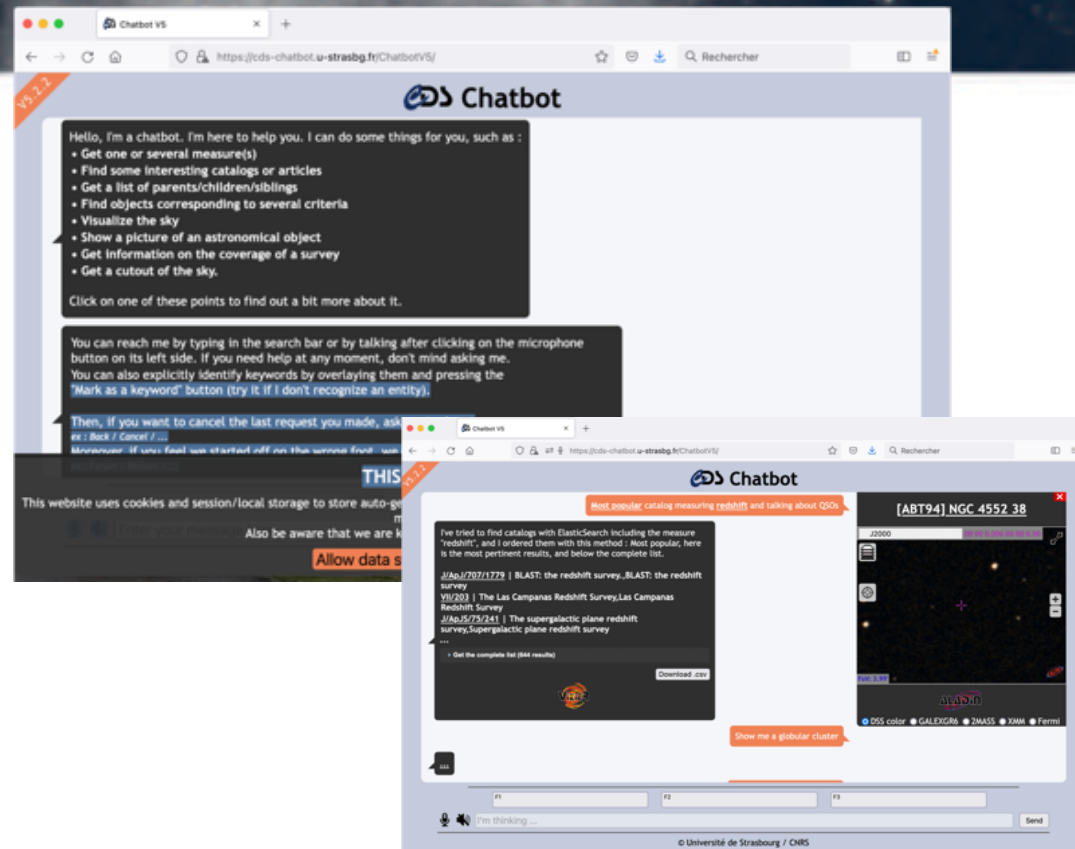

TAP and the Data Models

□ Chatting with the services

What is the effective temperature of Sirius ?

- A long-term work started in 2017, now again based on an Open source platform (RASA)
- We focus the effort on the Natural Language translation to understandable queries by the CDS services and the presentation of the results.
- The voice integration opens also a new investigation area, the equal access to the services and the to Research data, especially for people with disabilities.

Show me a globular cluster

It benefits from authors in Simbad, missions and wavelengths in Vizier, DJIN to recognize identifiers in a text, UCDS, ADQL / TAP, the Sesame name resolver, Aladin Lite, => in-house and VO effort

A. Schaaff, T. Boch, S. Derriere. M. Brouty
Intern: Ahmet Adam (UTBM)

□ Inclusive CDS

- A SARA 2020 topic was **Getting everyone connected**: software and hardware interfaces that make a difference for professionals and students with **disabilities** in on-line work; making **online accessible to everyone** around the World.
- IVOA huge work is one of the keys of the **Accessibility...** but in the sense of **FAIR** !
- It sounded great to introduce a **noble human concern** in addition to the usual Scientific and technological concerns. And to start looking for solutions to make it happen.
- We may already have some of the keys for the **Accessibility** in the sense of “**to all**” (We are not starting from scratch).

SARA2020

30 November, 2 & 4 December 2020, on-line event hosted by the European Space Astronomy Centre (ESAC)

Space science and astronomy organisations around the world engage professionals in the exploitation of the scientific data generated by space missions and ground-based astronomy facilities. They also involve information technology experts in the development of software tools needed for this purpose. In addition to this, these organisations also help train students and young professionals in every aspect of the technical implementation and scientific exploitations of such space and astronomy projects.

In particular, these organisations drive to make their data archives and on-line resources accessible to all academic and professional researchers, and to work seamlessly with them regardless of their condition.

In this context, ESA, IAU, ESO and SKAO are teaming up to organise a workshop on the links between space science and astronomy, inclusion and disability. A first on-line event will consist of three non-consecutive daily sessions on 30th November, 2nd and 4th December 2020. A follow-up workshop will take place in April 2021 at the European Space Astronomy Centre, ESAC, near Madrid, Spain, and it will be the first of a series of workshops focusing on diversity and inclusion aspects in this professional community.

□ Inclusive CDS (2)

- A six month study started in September 2021 to
 - learn about disabilities
 - draw up an initial inventory of the accessibility of CDS data and services for people with disabilities
 - find solutions to improve the existing
 - set up upstream new ways of presenting data and services, developing interfaces and tools
- Towards an inclusive CDS ?
- Unrealistic and too hard ?
Hard, yes but it is a first step
- First experiments are ongoing with CDS webpages, AladinLite, ...

Exemple for view accuracy disability

Other experiments with readers to help blind people with a voice translation of the text

A. Schaaff, G. Mantelet, T. Boch
Intern: Romain Berger (UTBM)

□ Future investigations

- As usual not Geek-driven, a continuous R&D effort to provide an **added value to the data access & presentation mechanisms.**
- **Continuous work on Science platforms**
- **A Lab part on CDS Website**
- Efforts to make the data and services **accessible to Everyone.**

□ Conclusion

- A (less than usual) coverage with various spin-offs:
 - improving the services <- R&D -> updating the staff skills
 - new (but is not enough by itself !) technologies.
- A team work (@ ObAS level): contracts, dedicated pool of workstations, presentation of the services and the professions to integrate quickly the newcomers, etc.
- Back to a larger R&D panel in 2022 !

Science @ CDS

Scientific diversity at CDS

- **Information discovery and processing**

Ontology, semantics, resource discovery

S. Derrière, F. Genova

- **Stellar astronomy**

Circumstellar matter, AGB/post-AGB stars, surveys

C. Loup

- **Galactic astronomy**

Binary stars, X-ray surveys

A. Nebot

The role of CDS scientists

- part of integrated team together with documentalists and engineers
- selection and validation of scientific data
- validation of the data description
- scientific advice for / supervision of the development and evolution of CDS services

Scientific input

All CDS scientists contribute their

- expertise
- view on astronomy and information science
- experience with CDS services
- new ideas

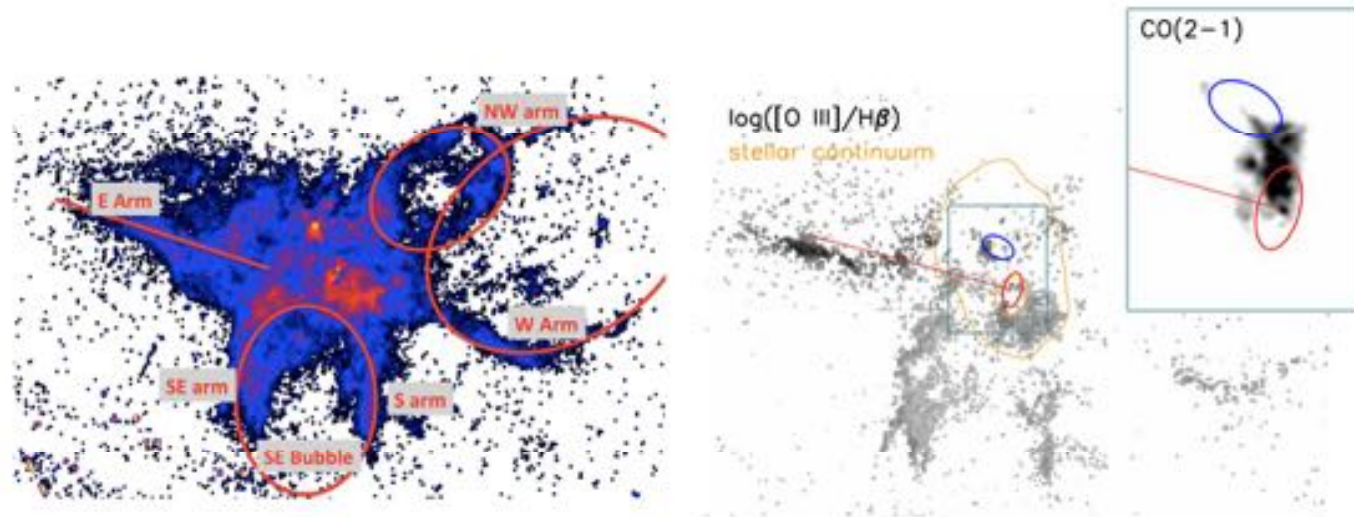

All CDS scientists contribute to

- the daily workflow/data ingestion
- the development and evolution of the CDS services

Recent result for ionization of gas in active and merging galaxies

M. Allen

Tracing the Ionization Structure of the Shocked Filaments of NGC 6240

Medling et al. 2021 – accepted ApJ (arXiv:2111.01025)

Finalisation of long term project from HST WFC3 observations obtained in cycle 19 (Led by Kewley & Allen). Ionization structure investigated with high-res emission line maps (HST, Keck, ALMA). The ‘bubbles’ in the gas-rich merger galaxy NGC 6240 show a clear shock front traced by high $[O\ III]/H\beta$ and $[O\ III]/[O\ I]$.

Europe's Particle Physics

Gas thermodynamics and feedback in galaxy clusters from Sunyaev Zel'dovich effects

Amodeo et al. 2021, *Phys. Rev. D*, 103, 063514

During his internship with **C. Bot & K. Lutz**, using IRAS and Planck, Axel Rymar removed significant foreground and background emission to build a set of spectral energy distributions of 21 galaxies including the microwave regime

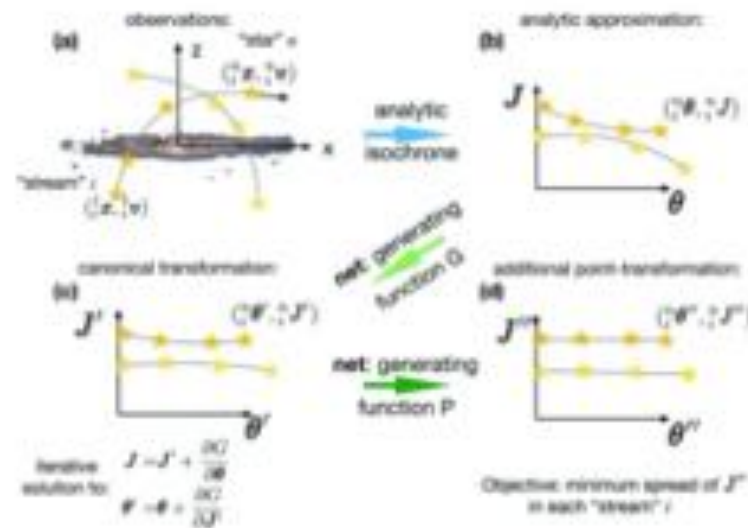

G. Monari

The ACTIONFINDER:

An Unsupervised Deep Learning Algorithm for Calculating Actions and the Acceleration Field from a Set of Orbit Segments

Ibata, Diakogiannis, Famaey, Monari (ApJ, 915, 5, 2021)

Through a two steps process, from only the "segment" of one or more orbits (for example positions and velocities of stars in thin streams, observed in the stellar halo of the Milky Way), we are able to determine to a high degree of accuracy both the orbital actions J (integrals of motion, conserved along the orbits) and the gravitational field where they "live" (i.e., the gravitational field of the Milky Way).

Observing the sky in X-rays allows us to detect the hottest and most energetic phenomena in the Universe.

WP2: Multi- wavelength/ multi-messenger counterparts lead by [CNRS/Observatoire Astronomique de Strasbourg](#)
Objectives: Provide multiwavelength statistical identifications and spectral energy distributions of XMM-Newton X-ray sources including those discovered in the stacked catalogue and new transient sources found by the variability work package. Train to identify electromagnetic counterparts of multi-messenger events.

P. Ocvirk

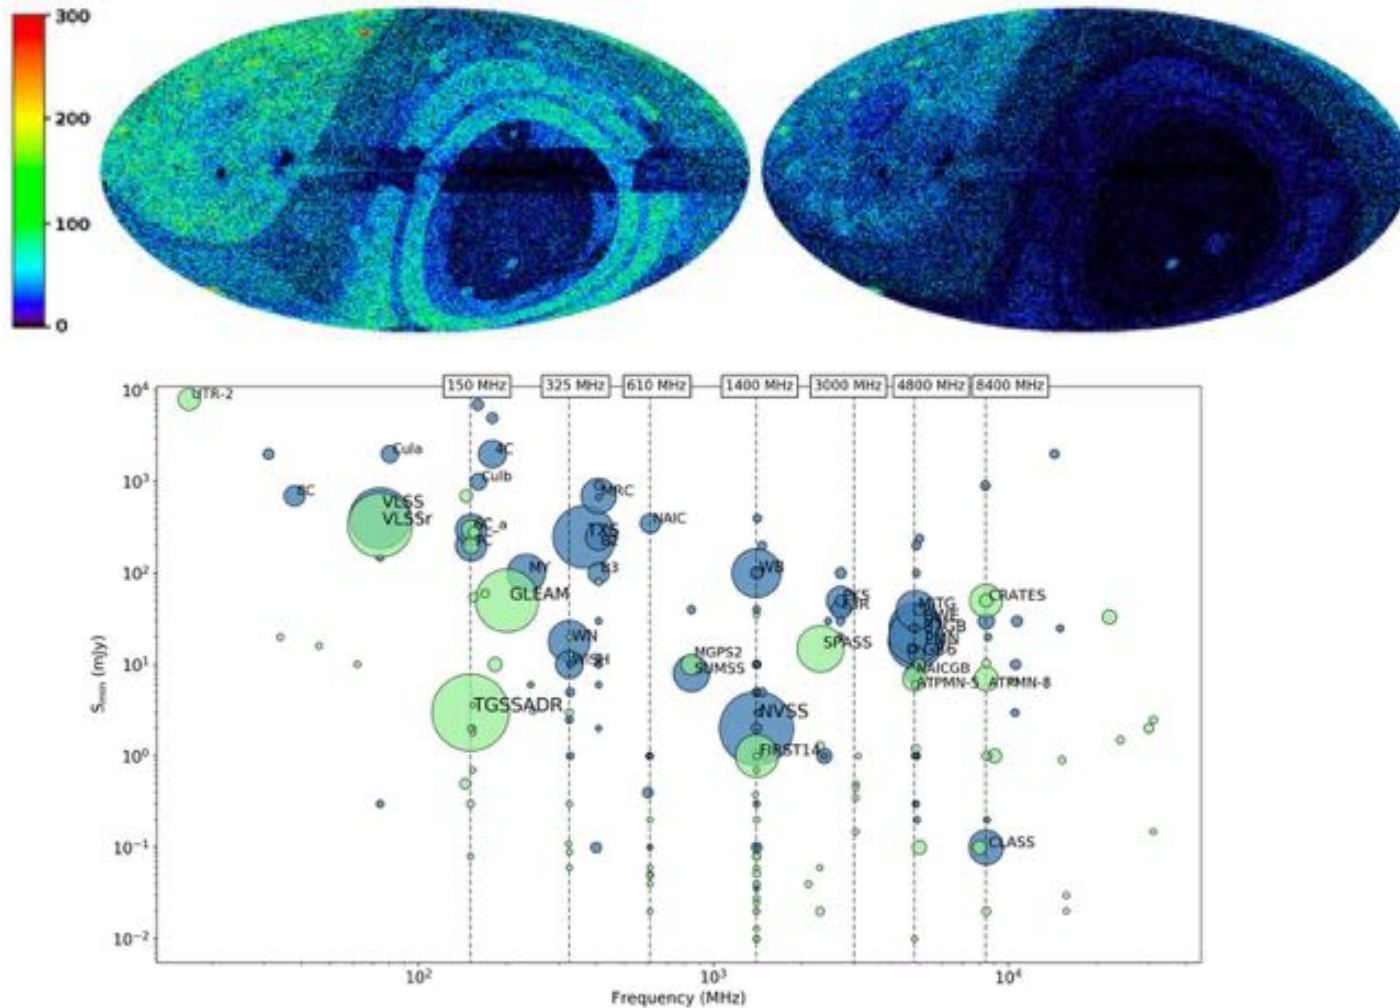

Galaxy Formation during the Epoch of Reionization

- o PI of Cosmic Dawn III, Radiation-hydrodynamical sim of galaxy formation during the EoR, completed in Feb. 2021 on Summit (Oak Ridge National Laboratory). Topics include:
 - o Galaxy populations, impact of rad. feedback, high-z luminosity functions
 - o Calibration of sub-grid models for 21cm predictions
 - o Lyman-alpha transmission in high-z IGM through EoR
- o Produced 20 PB of data in 10 days
- o uses Hybrid CPU/GPU computing.
- o Member of SKA and NenuFAR science team

The SPECFIND V3.0 catalog of radio continuum cross-identifications and spectra: Reaching lower frequencies★

Y. Stein, B. Vollmer, T. Boch, G. Landais, P. Vannier, M. Brouty, M. G. Allen, S. Derriere, and P. Ocirk

Conclusion

- Scientists are part of an integrated team
- Scientific diversity is vital for the CDS
- active science @ CDS
- CDS scientists mostly rely on external collaborations
- Independent scientific activities have to be preserved and acknowledged

CDS Plans and challenges

November 30, 2021

Mark Allen - Director CDS

□ CDS Strategy

- **Constantly evolving** — based on scientific needs
- **Main strategy** for core services is well established:
 - Pursue the CDS mission at the highest possible level
 - Science-driven Data Centre for “reference” data
 - Spirit of Open Science, and application of FAIR principles
- **Themes**
 - Reinforcement of core mission** — trusted reference data centre
 - Enabling science with the CDS services** — supporting specific scientific projects, direct support of astronomers, and development of the CDS science team
 - Engagement with the astronomy community**
 - Adaptation and innovation** — responding to science needs and increasing volume
 - Building on success of CDS by maintaining specialised staff profiles & teamwork**

□ Plans 2021-2022

Continuation of core work of building CDS content and operating services.

Immediate topics:

- Managing with the current continuing uncertainty.
- Re-grouping to **address the consequences of 2020-2021.**
- Work toward a “*new normal*” with different rhythms.
 - Tele-working (up to 2 days for various roles).
 - Include Virtual conferences/meetings as part of regular operations.
 - Put high value on in-person interactions.
 - A changed approach to travel / missions

□ Plans 2021-2022

- **CDS Service Developments.** *(From yesterday's presentations)*
 - SIMBAD object types
 - Deployment of BCS (CDS Biblio)
 - Manage with changes in publisher systems
 - Progress on New Sesame
 - VizieR 2 - planning
 - Establish an approach for the very large data sets - answering 'should CDS develop such capacity?'
 - Survey of up-coming missions and surveys
 - Engage a contract engineer for VizieR
 - Progress on the new X-Match prototype
 - Aladin Lite v3.

- 
- CDS Web Pages
 - CDS Hotline
 - Improvement to CDS code tracking - Gitlab, Github
 - Transition to domain name cds.unsitra.fr
 - SIMBAD Web interface / APIs
 - Jupyter notebooks
 - Follow-up opportunities with planetariums

□ Plans 2020-2021

- **CDS infrastructure**

- Delays for more moves into the UNISTRA data centre
- More investment in our server room for electrical redundancy for cooling system
- Continue investments in hardware - servers / cold-storage
 - Virtual servers and controllers
- Plan for major upgrades: All-Sky-Data ~ 5PB in ~2025
- Continue program of workstation improvements
 - (laptops / desktops / monitors)

□ Important data sets in 2022

Maintain approach of being as complete as possible with main astronomy journals

What is the “reference data” from future large missions/surveys that should be made available at CDS ?

- ‘Complete’ the future-watch table

2022:

- Gaia DR3
- GSC 2.4
- PanSTARRS DR2
- ESO catalogues
- +++

Telescope/Instrument	Number of records	ETA	manageable at CDS? (tech-wise)	Band/depth
Gaia all epochs	$10^9 \times 100 \text{ epochs} \sim 1e11$	2022-2024	yes	optical wide
Gaia flat	1.7×10^9	available in Vizier	no	optical wide
Pan-STARRS DR1-2 all epochs	$2.10^9 \times 10 \text{ epochs} \sim 2^10$	done	yes	optical wide
Pan-STARRS DR1-2 flat	2.10^9	DR1 in Vizier	~yes?	optical wide
ESO Phase III cats	$1-2 \times 10^9$	ongoing	yes	optical wide
LSST/Rubin all epochs	$4^10 \times (-250 \text{ epochs}) = 10^13$	2025-2030	yes	optical wide
LSST flat	40×10^9	2025-2030	yes	optical wide
EUCLID	$\sim 10^10$ galaxies	2028 and beyond	yes	optical/NIR wide
JWST	deep extragal surveys, narrow FoV, high res	2022 and beyond	yes	NIR deep
Nancy Grace RST	a few 10^9 stars, 4×10^8 galaxies	launch 2027	yes	orange / NIR deep/medium wide
ELT	~narrow FoV, very high res ($0.005''$)	2027	yes	optical/NIR deep
Giant Magellan Telescope	deep extragal surveys, narrow FoV, very high res ($0.01''$)	2029	yes	optical/NIR deep
TMT	deep extragal surveys, narrow FoV, very high res ($0.015''$)	2027	yes	NUV/optical/mid-IR
21cm / SKA	up to 10^9 gals	2030-ish?	yes	radio wide deep
GW: LIGO/PTA/LISA	?	operating and upcoming	yes	grav. wave
CTAO	?	2024	yes	gamma
KM3NET	?		yes	neutrino
ATHENA	?		yes	X-ray
SVOM	several $10^5 - 10^6$		yes	gamma

Future-watch - missions/surveys

CDS-50 Schedule:

January - A kick-off webinar announcing the year of events
- Webinar series

February 21-24 ESCAPE VO School to be held in Strasbourg (Hybrid mode)

May - Gaia DR3 - CDS contribution to the ObAS Gaia DR3 events

June 12-16 - AAS Summer Meeting - CDS Booth - 50th anniversary

June - SF2A - investigating whether we can highlight CDS-50 at a session/other

June 27 - July 01 - EAS Annual meeting (Valencia, Spain) - CDS Lunch Session (accepted!)
- CDS booth - 50th anniversary

Aug 16-27 : IAU (Busan, Korea) - CDS booth - 50th anniversary

September 11-16 : ADASS (Victoria, Canada) - CDS booth - 50th anniversary

October / November:

Conference/workshop

- **Open science in Astronomy ‘from pixels to publications’**

(18-20 October?) (followed by school holidays)(Parliament session 17-20)

(8-10 November (followed by 11 November holiday)

(15-17 November)

(22-24 November) (followed by Strasbourg Christmas Markets)(Parliament session 21-24)

Other activities:

- Open a survey on the use of CDS services
- Make use of network to present CDS-50 in seminars at targeted institutes/countries
- Communication materials (short film?)

Open Science in Astronomy - *from pixels to publications*

On the occasion of the 50th anniversary year of the Centre de Données astronomiques de Strasbourg (CDS) in 2022, we propose to organise a conference on Open Science in Astronomy. The CDS has been at the forefront of data sharing in astronomy and we wish to celebrate 50 years of progress of the CDS services in a conference that attracts major actors in the international astronomy community, as well as CDS partners and representatives of the French Open science community to look forward to the future plans and challenges of Open Science in astronomy.

The themes of the conference will be developed along the lines of :

- The use of Open Science tools and services for astronomy research
- Current and future reference data sets in astronomy
- Plans and challenges for bibliographic services in astronomy
- Innovations to support scientific discovery with big a rich astronomy data sets
- The FAIR principles in astronomy and beyond.
 - FAIR - Findable, Accessible, Interoperable and Re-usable

□ Challenges - staffing

- **Administration**
 - CDS cannot work without administration - **long term replacement essential**
 - Contracts, Projects, Reporting, and an increased administrative load
- **Permanent Researchers**
 - 10 researchers — FTE ~3.75 (+1 Emeritus)
 - To be addressed by CNAP and CNRS candidates, & mobility (?)
- **Documentalists** - increased load needs to be addressed
 - Contract positions being opened in 2021/2022
 - **Replacement for the departure of a documentalist is essential**
- **Software Engineers**
 - **Contract engineer recruitment for Vizier URGENT**
 - **Research Engineer retirement - 2024 !! replacement needed on this timescale**
 - Research engineer (bibliography) retirement ~2029

□ Summary

- **A busy year ahead in 2022**
 - Re-grouping to work toward the CDS mission
 - Preparation of the HCERES evaluation (of ObAS)
- Many very exciting things to do in the community
 - A lot of innovations, improved services, and the message of Open Science
 - CDS-50 as a theme throughout the year with specific events
 - Strengthen links with partners
- Projects - working well, helping to prepare the future, and connection with the wider world of data sharing and large astronomy projects
- Staff & team support necessary — work together to meet the challenges
