MOC SERVER

Mail: cds-question@astro.unistra.fr **Site:** cds.unistra.fr **Twitter:** twitter.com/CDSastro

MOC Server is a tool for retrieving as fast as possible the list of astronomical data sets (catalogs, surveys, ...) having at least one observation in a specific sky region. The default result is an IVORN list (publisher_id). MOC Server is based on Multi-Order Coverage maps (MOC) described in the IVOA REC standard.
