

DS5

CDS/INAF proposals for Stage 03

Registry query tool

- Follow-up of work in Stages 1-2
- Move to UCD1+
- Explore use of standard query methods (ADQL), and apply to other registries (AG)
- Support standard interfaces for catalogue retrieval (VOTable)
- Demo in august at IAU, Prague

Ontology of object types

- Alexandre Richard will start working @CDS on april 1, 2006 (INAF)
- Complete ontology to include *all* SIMBAD types, and work on annotations
- Refine some concepts with more detailed description available in the Thesaurus
- Identify links to other knowledge bases (UCDs, other data models)
- Implement first use case (related to registry search)

Study registry contents

- Variety of keywords used to describe resources
- Try to normalize descriptions (VO semantics)
- Link with the ontology of object types (labels)
- Provide hints on ways to do intelligent resource discovery in the registry

```

Object Names recognition

- Goal: identify object names in literature, automatically!
- Study and specifications have been made:
 - Text formatting: HTML, PDF, ... to ASCII
 - Tagging (using Dic. of nomenclature, etc)
 - Tool for documentalists to add links, entries in SIMBAD, etc...
- Work on the Tagging task, and compare performances to previous works

Keywords in literature

- Study semantics of keywords in literature
 - In which context do keywords appear
 - What related concepts can be identified
- Explore articles to find expressions corresponding to
 - Ontology concepts
 - Thesaurus entries

e.g.: Neutron Stars

#O = Measured/Derived/Observed properties

O neutron_star cold

O neutron_star hot

O neutron_star radio-quiet

O neutron_star transient

O neutron_star transient

X-rays

#P = Physical processes

P neutron_star accreting

P neutron_star accretion

P neutron_star bursting

P neutron_star coalescing

P neutron_star cooling

P neutron_star evolution

P neutron_star glitches

P neutron_star magnetar

P neutron_star magnetized

P neutron_star mergers

#G = Geometrical/Morphological properties

G neutron_star atmosphere

G neutron_star bare

G neutron_star binaries

G neutron_star binaries

close

G neutron_star center

G neutron_star core

G neutron_star crust

G neutron_star double

G neutron_star isolated

G neutron_star magnetosphere

G neutron_star magnetosphere

active

G neutron_star polarCaps

G neutron_star precessing

G neutron_star surface

...
